**Fathers and Mothers: Dilemmas of the Work-Life Balance** Mar 22 2020 At the risk of sounding frivolous, there is a good case to be made for the argument that women constitute the revolutionary force behind contemporary social and economic transformation. It is in large part the changing role of women that explains the new household structure, our altered demographic behaviour, the growth of the service economy and, as a consequence, the new dilemmas that the advanced societies face. Most European countries have failed to adapt adequately to the novel challenges and the result is an increasingly serious disequilibrium. Women explicitly desire economic independence and the societal collective, too, needs to maximise female employment. And yet, this runs up against severe incompatibility problems that then result in very low birth rates. Our aging societies need more kids, yet fertility levels are often only half of what citizens define as their desired number of children. No matter what happens in the next decade, we are doomed to have exceedingly small cohorts that, in turn, must shoulder the massive burden of supporting a retired baby-boom generation. Hence it is tantamount that tomorrow's adults be maximally productive and, yet, the typical EU member state invests very little in its children and families.

**Fuel Cells** Sep 27 2020 Fuel Cells: Modeling, Control, and Applications describes advanced research results on modeling and control designs for fuel cells and their hybrid energy systems. Filled with simulation examples and test results, it provides detailed discussions on fuel cell modeling, analysis, and nonlinear control. The book begins with an introduction to fuel cells and fuel cell power systems as well as the fundamentals of fuel cell systems and their components. It then presents the linear and nonlinear modeling of fuel cell dynamics, before discussing typical approaches of linear and nonlinear modeling and control design methods for fuel cells. The authors also explore the Simulink implementation of fuel cells, including the modeling of PEM fuel cells and control designs. They cover the applications of fuel cells in vehicles, utility power systems, stand-alone systems, and hybrid renewable energy systems. The book concludes with the modeling and analysis of hybrid renewable energy systems, which integrate fuel cells, wind power, and solar power. Mathematical preliminaries on linear and nonlinear control are provided in an appendix. With the need for alternative power well established, we are seeing unprecedented research in fuel cell technology. Written by scientists directly involved with the research, this book presents approaches and achievements in the linear and nonlinear modeling and control design of PEM fuel cells.

**Dell'informe 2. Assemblaggi** Feb 13 2022 Se l'Informe è un carattere della nostra epoca, è indispensabile ripensare gli strumenti con cui descriviamo e trasformiamo la realtà. Come potrebbero mutare i nostri paradigmi se assumessimo l'Informe come strumento critico? Il ruolo operativo dell'Informe, proposto da Georges Bataille, permette di dare

senso a molte pratiche di trasformazione del mondo. “Assemblaggi” è costruito come un montaggio di testi su autori di diverse epoche. La descrizione e il commento delineano un percorso che indaga la potenza plastica e critica dell’Informe come apertura all’indeterminato. L’idea di un’Architettura geologica interroga le pieghe della Terra e dispiega una pratica del “maifinito” come nodo di congiunzione tra tempi e mondi diversi. Mettere in forma la tensione tra le cose costituisce il compito di un’Architettura terrestre per immaginare nuove alleanze capaci di generare futuri.

**Chess Made Easy** Jan 24 2023 This book will teach you to play chess in two hours. Studied more carefully it can make you an average player. Both the authors have world-wide reputations as a chess player, writers and teachers. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

**Bruno Maderna** Dec 19 2019 Bruno Maderna, one of the most influential composers in the 20th century and a formidable conductor, was the oldest of a notable group of Italian composers who began their careers shortly before the Second World War. Many details of this biography are based on his correspondences and reports of his engagements across the world.

**Benefit/cost Analyses of Laws and Regulations Affecting Coal** Feb 01 2021

**Senza Vestimenta: The Literary Tradition of Trecento Song** Apr 03 2021 The metaphor of marriage often describes the relationship between poetry and music in both medieval and modern writing. While the troubadours stand out for their tendency to blur the distinction between speaking and singing, between poetry and song, a certain degree of semantic slippage extends into the realm of Italian literature through the use of genre names like canzone, sonetto, and ballata. Yet, paradoxically, scholars have traditionally identified a ‘divorce’ between music and poetry as the defining feature of early Italian lyric. Senza Vestimenta reintegrates poetic and musical traditions in late medieval Italy through a fresh evaluation of more than fifty literary sources transmitting Trecento song texts. These manuscripts have been long noted by musicologists, but until now they have been used to bolster rather than to debunk the notion that so-called ‘poesia per musica’ was relegated to the margins of poetic production. Jennings revises this view by exploring how scribes and readers interacted with song as a fundamentally interdisciplinary art form within a broad range of literary settings. Her study sheds light on the broader cultural world surrounding the reception of the Italian ars nova repertoire by uncovering new, diverse readers ranging from wealthy merchants to modest artisans.

**Music and Technologies 2** Mar 14 2022 The findings of this book are drawn from a conference held in 2013 in Kaunas, Lithuania, titled “Music and Technologies 2”, which provided a continuous discussion on the interdisciplinary music research developing currently at such important forums as the CIM (Conference on Interdisciplinary Musicology) and the ISMIR (International Society for Music Information Retrieval). This book consists of a collection of articles written by musicologists and musical performers, sound engineers, and educators from Europe and the USA. Leading contemporary ideas in the field of music technologies are explored, as are some aspects of the cognition of classical and contemporary music.

**Portfolio Optimization** Nov 22 2022 Eschewing a more theoretical approach, Portfolio Optimization shows how the mathematical tools of linear algebra and optimization can quickly and clearly formulate important ideas on the subject. This practical book extends the concepts of the Markowitz “budget constraint only” model to a linearly constrained model. Only requiring elementary linear algebra, the text begins with the necessary and sufficient conditions for optimal quadratic minimization that is subject to linear equality constraints. It then develops the key properties of the efficient frontier, extends the results to problems with a risk-free asset, and presents Sharpe ratios and implied risk-free rates. After focusing on quadratic programming, the author discusses a constrained portfolio optimization problem and uses an algorithm to determine the entire (constrained) efficient frontier, its corner portfolios, the piecewise linear expected returns, and the piecewise quadratic variances. The final chapter illustrates infinitely many implied risk returns for certain market portfolios. Drawing on the author’s experiences in the academic world and as a consultant to many financial institutions, this text provides a hands-on foundation in portfolio optimization. Although the author clearly describes how to implement each technique by hand, he includes several MATLAB® programs designed to implement the methods and offers these programs on the accompanying CD-ROM.

**The Observation and Analysis of Stellar Photospheres** Mar 02 2021 Describes the equipment, observational techniques and analysis used in the investigation of stellar photospheres.

**On Political Economy and Econometrics** Oct 17 2019 *On Political Economy and Econometrics: Essays in Honor of Oskar Lange* is a commemorative publication to celebrate the achievements of Polish economist and diplomat Oskar Lange. The book is a collection of papers that tackles various issues in economy. The coverage of the text includes articles that deal with economic problems and concerns, such as the problem of monetary liquidity; research on the measures of inequality and concentration; and consumer's sovereignty in a planned economy. The book also presents materials about various methods employed in managing economy, such as stochastic linear programming and its application to economic planning; the application of statistical and mathematical methods in studies of the allocation of productive powers; and on the control of production and investment in socialism. The text will be of great interest to economists, sociologists, political scientists, and game theorists.

**Improvisation in the Arts of the Middle Ages and Renaissance** Jul 26 2020 One impression that stands out from this collection is the extent to which improvisation was an important factor in all of the arts. As each of the authors assembles a case by ferreting out bits and pieces of information having to do with a single art, the weight of the assembled material lends additional strength to each case. By considering the overall picture that results, as well as that made by each of the individual studies, the reader is able to see much more clearly the role played by improvisation from the late Middle Ages through to the time of Shakespeare and beyond. A careful reading of the essays brings with it the awareness that to ignore improvisation is to distort the art in a major way. In light of the present volume, the very concept of faithful historical re-creation takes on a much broader and more complex character.

**Computational Problems for Physics** May 04 2021 Our future scientists and professionals must be conversant in computational techniques. In order to facilitate integration of computer methods into existing physics courses, this textbook offers a large number of worked examples and problems with fully guided solutions in Python as well as other languages (Mathematica, Java, C, Fortran, and Maple). It's also intended as a self-study guide for learning how to use computer methods in physics. The authors include an introductory chapter on numerical tools and indication of computational and physics difficulty level for each problem. Readers also benefit from the following features: • Detailed explanations and solutions in various coding languages. • Problems are ranked based on computational and physics difficulty. • Basics of numerical methods covered in an introductory chapter. • Programming guidance via flowcharts and pseudocode. Ruben Landau is a Distinguished Professor Emeritus in the Department of Physics at Oregon State University in Corvallis and a Fellow of the American Physical Society (Division of Computational Physics). Manuel Jose Paez-Mejia is a Professor of Physics at Universidad de Antioquia in Medellín, Colombia.

**Technical Java** Aug 27 2020 *Annotation* This is a technical programming book written by a real scientific programmer filled with practical, real-life technical programming examples that teach how to use Java to develop scientific and engineering programs. The book is for scientists and engineers, those studying to become scientists and engineers, or anyone who might want to use Java to develop technical applications. "Technical Java" gives the reader all the information she needs to use Java to create powerful, versatile, and flexible scientific and engineering applications. The book is full of practical example problems and valuable tips. The book is for people learning Java as their first programming language or for those transitioning to Java from FORTRAN or C. There are two handy chapters at the beginning of the book that explain the differences and similarities between FORTRAN, C, and Java.

Intelligent Virtual Agents Dec 23 2022 Welcome to the proceedings of the 9th International Conference on Intelligent Virtual Agents, held September 14–16, 2009 in Amsterdam, The Netherlands. Intelligent virtual agents (IVAs) are interactive characters that exhibit human-like qualities and communicate with humans or with each other using natural human modalities such as speech and gesture. They are capable of real-time perception, cognition and action, allowing them to participate in a dynamic physical and social environment. IVA is an interdisciplinary annual conference and the main forum for presenting research on modeling, developing and evaluating IVAs with a focus on communicative abilities and social behavior. The development of IVAs requires expertise in multimodal interaction and several AI fields such as cognitive modeling, planning, vision and natural language processing. Computational models are typically based on experimental studies and theories of human-human and human-robot interaction; conversely, IVA technology may provide interesting lessons for these fields. The realization of engaging IVAs is a challenging task, so reusable modules and tools are of great value. The fields of application range from robot assistants, social simulation and tutoring to games and artistic exploration.

Rationality in Social Science Oct 21 2022 The concept of rationality and its significance for theory and empirical research in social science are key topics of scholarly discussion. In the tradition of an analytical as well as empirical approach in social science, this volume assembles novel contributions on methodological foundations and basic assumptions of theories of rational choice. The volume highlights the use of rational choice assumptions for research on fundamental problems in social theory such as the emergence, dynamics, and effects of social norms and the conditions for cooperation and prosociality.
