Nursing and Nursing Education Aug 07 2021 Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. Patient Safety and Quality Aug 19 2022 "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk/>

The Future of Nursing May 16 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Medical Surgical Nursing Care Feb 01 2021 Medical Surgical Nursing Care 3e has an even stronger focus on the

professional Practical nursing program and is a key component in the LPN/LVN series at Pearson. It has a clear and readable writing style, it provides a strong foundation for understanding common disorders that affect adults. Opening units of the book focus on concepts, issues, and foundational knowledge. The units that follow focus on common diseases and disorders organized by body system. Each unit begins with review of the system's structure and function, nursing assessment, and commonly used diagnostic tests for disorders of that system. To facilitate learning, disorder-specific content follows a consistent pattern, beginning with discussion about the disorder, its risk factors, causes, effects on the body, manifestations, and possible complications. Because nurses are integral members of the healthcare team, interdisciplinary care sections include nursing implications for medications, nutritional therapies, surgery and other treatments, including complementary therapies. Each disorder concludes with nursing care, including priorities of care, health promotion, assessment, nursing care measures, and a section addressing continuity of care to home or the community. This text provides more depth in common disease processes, their treatment, and related nursing care. Although organized by body systems for clarity, the book retains a nursing focus throughout. Rationales are provided for nursing interventions to help the student understand the why, not just the what.

The Effectiveness of Electronic Health Record with Standardized Nursing Languages for Communicating Patient

Status Related to a Clinical Event Mar 02 2021 ABSTRACT The purpose of this research was to explore nurses' perceptions of the effectiveness of nursing documentation of patient status during a clinical event when using electronic documentation with or without embedded standardized languages. The theoretical framework for this study was based on principles of information theory. This study was significant in two very important ways; first, in contrast to prior studies, the perceptions of nurses were focused on the documentation of a clinical event. Second, this study explored the nurses' opinions about the strengths and limitations of using structured languages (specifically, the North American Nursing Diagnosis Association (NANDA), the Nursing Intervention Classification (NIC), and the Nursing Outcomes Classification (NOC)) for telling the patient's story during a clinical event, as well as collecting nurses' suggestions for improving electronic documentation. Semi-structured interviews of 37 nurses were conducted in two acute care hospitals. Both hospitals used electronic documentation, but only one used embedded standardized nursing languages. Half the interviewees were asked questions from the perspective of the nurse documenting a clinical event; half were asked questions from the perspective of a nurse reviewing another nurse's documentation of a clinical event. Recorded interviews were transcribed, and the transcripts

analyzed using qualitative content analysis. A panel of judges was used to establish reliability of the coding scheme. The results showed that nurses perceived aspects of three categories (usability, legibility, and communication) as strengths of the documentation system. Nurses perceived aspects of three categories (usability, communication, and workarounds) as limitations of the documentation system. Potential solutions to improve the documentation system were defined related to three categories (usability, communication, and collaboration). Usability was perceived by the nurses as a strength of the electronic documentation with embedded nursing languages. Usability of the electronic documentation system with nursing languages was also perceived as a limitation. Improving language usability was identified as a potential solution to improve the electronic documentation system with embedded nursing languages.
