Nanotechnology is the key technology of the 21st century. The possibility to exploit the structures and processes of biomolecules for novel functional materials, biosensors, bioelectronics and medical applications has created the rapidly growing field of nanobiotechnology. Designed as a broad survey of the field, this book combines contributions from bioorganic and bioinorganic chemistry, molecular biology, materials science and bioanalytics to fathom the full scope of current and future developments. It is divided into four main sections: * Interphase Systems * Protein-based Nanostructures * DNA-based Nanostructures * Nanoanalytics Each chapter describes in detail currently available methods and contains numerous references to the primary literature, making this the perfect "field guide" for chemists, biologists and materials scientists who want to explore the fascinating world of nanobiotechnology. Der vorliegende Band befasst sich zentral mit dem Problem der Anwendung der Transzendentalphilosophie auf die praktische Philosophie. Zu Ehren von Marco Ivaldo haben sich einige der führenden Fichte-Interpreten zusammengetan, um das Thema diachronisch zu behandeln. Angefangen bei Kant bis hin zur zeitgenössischen Philosophie werden einige der philosophischen Hauptpositionen (Kant, Fichte, Hegel, Husserl, Deleuze und viele weitere) auf ihre Verträglichkeit mit dem transzendentalphilosophischen Ansatz in praktischer Hinsicht geprüft.*****The present volume deals with the problem of the application of transcendental philosophy to practical philosophy. In honour of Marco Ivaldo, some of the leading experts on Fichte have teamed up to treat the subject diachronically. From Kant to contemporary philosophy, some of the main philosophical positions (Kant, Fichte, Hegel, Husserl, Deleuze, and many others) are examined in view of their compatibility with the transcendental-philosophical approach in a practical way. The PUILS series delivers reviews of progress in Ultrafast Intense Laser Science, an emerging field. This sixth volume covers a broad range of topics from this interdisciplinary research field to provide a state-of-the-art report of short time Laser physics. Je tiens également a remercier l'editeur KLUWER que nous a garanti une pu blication aisee et attrayante. Ce n'est pas sans fierte que j'ai l'honneur d'introduire la presente edition des actes du congres. PREFACE In the text mentioned above, it has been stated that the texts of the General Rap porteurs were published in their original language and the texts of the opening and closing speeches, although they were made in the five Congress languages (Dutch, French, English, German and Spanish), were published in English, as the Belgian organisers deemed this to be the most rational solution, even though the Con gress took place in a country where three different languages (Dutch, French and German) are spoken there. As regards the publication of this book, I would like to thank Mrs. CAS MAN, who made the texts ready for printing, Profe~sor R. DE CORTE, who saw to the distribution of the texts during the Congress, and the KLUWER publishing com pany for their excellent and faultless publication. I cannot stifle a distinct feeling of pride at being privileged enough to introduce this publication of the Reports. VORWORT Im vorstehenden Text is erortert worden aus welchen GrUnden die Gesamt berichte in ihren originellen Sprachen veroffentlicht wurden, und die Texte der feierlichen Eroffnungssitzung und der Schluss-sitzung im Englischen, obwohl

diese verfasst wurden in den fünf Kongresssprachen (Deutsch, Englisch, Französisch, Niederländisch und Spanisch) und obgleich der Kongress veranstaltet wurde in einem Land wo es drei Sprachen (Niederländisch, Französisch und Deutsch) gibt. This study provides a new interpretation of how political authority was conceived and transmitted in the Early Mongol Empire (1227-1259) and its successor state in the Middle East, the Ilkhanate (1258-1335). Authority within the Mongol Empire was intimately tied to the character of its founder, Chinggis Khan, whose reign served as an idealized model for the exercise of legitimate authority amongst his political successors. Yet Chinggis Khan's legacy was interpreted differently by the various factions within his army. In the years after his death, two distinct political traditions emerged within the Mongol Empire, the collegial and the patrimonialist. Each of these streams represented the economic and political interests of different groups within the Mongol Empire, respectively, the military aristocracy and the central government. The supporters of both streams claimed to adhere to the ideal of Chinggisid rule, but their different statuses within the Mongol community led them to hold divergent views of what constituted legitimate political authority. Michael Hope's study details the origin of, and the differences between, these two streams of tradition; analyzing the role that these streams played in the political development of the Mongol Empire and the Ilkhanate; and assessing the role that ideological tension between the two streams played in the events leading up to the division of the Ilkhanate. Hope demonstrates that the policy and identity of both the Early Mongol Empire and the Ilkhanate were defined by the conflict between these competing streams of Chinggisid authority. This book highlights the latest experimental and theoretical developments in the field of femtochemistry, with papers describing the physics and chemistry of ultrafast processes in small molecules, complex molecular systems, clusters, biological systems, solids, matrices, liquids and at surfaces and interfaces. The recent developments in frequency-domain studies of femtodynamics are also presented. In addition, the latest achievements in femtosecond control of chemical reactions are presented, together with the newest techniques in real-time probing of reactions such as ultrafast x-ray or electron diffraction. The papers are rich in references giving a clearcut state-of-the-art of the topics being discussed. The book should be a valuable tool to all persons in the field and to young scientists. Contributors include: A H Zewail, J Jortner, V S Letokhov, J Manz, R S Berry, C Wittig, K B Eisenthal, A W Castleman Jr., J T Hynes, W H Gadzuk, R Kosloff, S Mukamel, K R Wilson; G Fleming, D Wiersma, K Yoshihara, V Sundström, A Apkarian, N Scherer, A Myers, R Schinke, J R Huber, R B Gerber, G Gerber and P M Champion. Contents:Keynote and Overview PapersElementary ReactionsComplex Molecular SystemsClustersFemtodynamics from SpectroscopyControl; Biological SystemsSurfaces and InterfacesLiquidsSolids and MatricesTechniques and Methods Readership: Chemists, physicists, biophysicists and materials scientists. keywords: "Collection of incunabula and early medical prints in the library of the Surgeon-general's office, U.S. Army": Ser. 3, v. 10, p. 1415-1436. Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. Amongst the troubadour poets, Giraut de Borneil was one of the most important and influential. This 1989 edition covers Giraut's entire output. This book covers a broad range of topics from the interdisciplinary research field of ultrafast intense laser science, focusing on atoms and molecules interacting with intense laser fields, laser-induced filamentation, high-order harmonics generation, and high power lasers and their applications. This sixteenth volume features contributions from world-renowned researchers, introducing the latest reports on probing molecular chirality with intense laser fields, and the most recent developments in the Shanghai Superintense Ultrafast Laser Facility project. The PUILS series delivers up-to-date reviews of progress in this emerging interdisciplinary research field, spanning atomic and molecular physics, molecular science, and optical science, which has been stimulated by the recent developments in ultrafast laser technologies. Each volume compiles peer-reviewed articles authored by researchers at the forefront of each of their own subfields of ultrafast intense laser science. Every chapter opens with an overview of the topics to be discussed, so that researchers unfamiliar to the subfield, especially graduate students, can grasp the importance and attractions of the research topic at hand; these are followed by reports of cutting-edge discoveries. The origin, development and spread of the feast of the Exaltation of the Cross is traced on the basis of liturgical sources, and through a careful examination of the liturgical textual material, the meaning of the feast is analyzed with respect to its content. Among the important points receiving attention in this analysis are the place, function and significance of the Cross relic, and the theology of the Cross, or the process whereby the understanding of the Cross was shaped, as that was invested in the feast. The research is based on sources of Western liturgy from the early Middle Ages, and therefore has bearing on the period in the West in which a multiform liturgy, celebrated according to various indigenous local and regional traditions, gradually made way for one uniform Latin liturgy patterned on Roman models. The feast of the Exaltation of the Cross spread through the West from Rome within this context of standardization and Romanization. This raises questions about the uniformity and the Roman content of the feast. This study especially examines to what degree indigenous interpretations of the Cross, which were part of the legacy of the Hispanic and Gallican traditions in particular, continued to be preserved through the liturgical books of the early Middle Ages. "The purpose was to give to the Librarians of America correct and authentic information. As the date of their Convention was set for January 1st, 1925 there was no time to spare if hundreds of conservative publishers were to be induced to ship their thousands of volumes from Bremen by December 1st. The exhibit represents fairly the output during the last ten years of German literary and scientific works." -- Preface. In Lives of the Prophets Mohamad Reza Ghiasian analyses the images of the two extant illustrated copies of Hafiz-i Abru's Majma' al-tawarikh, which were produced for the Timurid ruler Shahrukh (r. 1405-1447). Over the last decade, studies of the Cold War have mushroomed globally. Unfortunately, work on Latin America has not been well represented in either theoretical or empirical discussions of the broader conflict. With some notable exceptions, studies have proceeded in rather conventional channels, focusing on U.S. policy objectives and high-profile leaders (Fidel Castro) and events (the Cuban Missile Crisis) and drawing largely on U.S. government sources. Moreover, only rarely have U.S. foreign

relations scholars engaged productively with Latin American historians who analyze how the international conflict transformed the region's political, social, and cultural life. Representing a collaboration among eleven North American, Latin American, and European historians, anthropologists, and political scientists, this volume attempts to facilitate such a cross-fertilization. In the process, *In From the Cold* shifts the focus of attention away from the bipolar conflict, the preoccupation of much of the so-called "new Cold War history," in order to showcase research, discussion, and an array of new archival and oral sources centering on the grassroots, where conflicts actually brewed. The collection's contributors examine international and everyday contests over political power and cultural representation, focusing on communities and groups above and underground, on state houses and diplomatic board rooms manned by Latin American and international governing elites, on the relations among states regionally, and, less frequently, on the dynamics between the two great superpowers themselves. In addition to charting new directions for research on the Latin American Cold War, *In From the Cold* seeks to contribute more generally to an understanding of the conflict in the global south. Contributors. Ariel C. Armony, Steven J. Bachelor, Thomas S. Blanton, Seth Fein, Piero Gleijeses, Gilbert M. Joseph, Victoria Langland, Carlota McAllister, Stephen Pitti, Daniela Spenser, Eric Zolov

Detection of drugs at low concentration is required in a variety of biological and medical situations, in order to avoid harmful side effects posed by some drug residues. The book details the instrumentation, detection, and application of nano chromatography (that is, any chromatographic and capillary electrophoretic method dealing with the detection of a sample at nano gram per liter or lower) and capillary electrophoresis in the analyses of biological and environmental samples. Methods discussed include: Nano Gas Chromatography, Nano Capillary Electrophoresis, Nano Chiral Chromatography, Micellar Electrokinetic Chromatography, Supercritical Fluid Chromatography, and Nano High Performance Liquid Chromatography.
