Praying Together Feb 25 2020 Nearly all Christians would affirm the centrality of prayer for a healthy Christian life. And yet, for many, prayer is often a challenge, requiring intense personal commitment and self-discipline. However, as Megan Hill points out in *Praying Together*, our normal approach to prayer leaves out a crucial component: other people. While personal prayer is important, God designed the church to be a community of believers who regularly pray together. Exploring the Bible's rich teaching on what it means to gather at God's throne with one voice, Hill lays a theological foundation for corporate prayer and offers practical guidance for making it a reality—in our families, churches, and communities.

Hyaenas Jun 30 2020 Despite their low species density, hyenas are both unique and vital components of most African and some Asian ecosystems.

Although there are only 4 species, they tend to clash with the interests of humans to a greater extent than many other mammals and one of the biggest obstacles facing those committed to the conservation of this species is the negative feelings that many people have towards hyenas. This action plan sets out to address some of the problems facing this species of animal, particularly the issue of public perception and awareness, and provides guidelines to rectify this situation.

Hillslope Hydrology and Stability Nov 03 2020 Landslides are caused by a failure of the mechanical balance within hillslopes. This balance is

governed by two coupled physical processes: hydrological or subsurface flow and stress. The stabilizing strength of hillslope materials depends on effective stress, which is diminished by rainfall. This book presents a cutting-edge quantitative approach to understanding hydro-mechanical processes across variably saturated hillslope environments and to the study and prediction of rainfall-induced landslides. Topics covered include historic synthesis of hillslope geomorphology and hydrology, total and effective stress distributions, critical reviews of shear strength of hillslope materials and different bases for stability analysis. Exercises and homework problems are provided for students to engage with the theory in practice. This is an invaluable resource for graduate students and researchers in hydrology, geomorphology, engineering geology, geotechnical engineering and geomechanics and for professionals in the fields of civil and environmental engineering and natural hazard analysis.

Biology, Ecology and Management of Aquatic Plants Jun 22 2022 There is a growing need for appropriate management of aquatic plants in rivers and canals, lakes and reservoirs, and drainage channels and urban waterways. This management must be based on a sound knowledge of the ecology of freshwater plants, their distribution and the different forms of control available including chemical and physical, and biological and biomanipulation. This series of papers from over 20 different countries was generated from the tenth in the highly successful series of European Weed Research Society symposia on aquatic plant management, this being the tenth. It provides a valuable insight into the complexities involved in managing aquatic systems, discusses state-of-the-art control techniques and deals with patterns of regrowth and recovery post-management. Careful consideration is given to the use of chemicals, a practice which has come under scrutiny in recent years. Underpinning the development of such control techniques is a growing body of knowledge relating to the biology and ecology of water plants. The authorship of the papers represents the collective wisdom of leading scientists and experts from fisheries agencies, river authorities, nature conservation agencies, the agrochemical industry and both governmental and non-governmental organisations.
