Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Designed for managers struggling to understand the risks in organizations dependent on secure networks, this book applies economics not to generate breakthroughs in theoretical economics, but rather breakthroughs in understanding the problems of security. Information Security is usually achieved through a mix of technical, organizational and legal measures. These may include the application of cryptography, the hierarchical modeling of organizations in order to assure confidentiality, or the distribution of accountability and responsibility by law, among interested parties. The history of Information Security reaches back to ancient times and starts with the emergence of bureaucracy in administration and warfare. Some aspects, such as the interception of encrypted messages during World War II, have attracted huge attention, whereas other aspects have remained largely uncovered. There has never been any effort to write a comprehensive history. This is most unfortunate, because Information Security should be perceived as a set of communicating vessels, where technical innovations can make existing legal or organisational frame-works obsolete and a breakdown of political authority may cause an exclusive reliance on technical means. This book is intended as a first field-survey. It consists of twenty-eight contributions, written by experts in such diverse fields as computer science, law, or history and political science, dealing with episodes, organisations and technical developments that may be considered to be exemplary or have played a key role in the development of this field. These include: the emergence of cryptology as a discipline during the Renaissance, the Black Chambers in 18th century Europe, the breaking of German military codes during World War II, the histories of the NSA and its Soviet counterparts and contemporary cryptology. Other subjects are: computer security standards, viruses and worms on the Internet, computer transparency and free software, computer crime, export regulations for encryption software and the privacy debate. - Interdisciplinary coverage of the history Information Security - Written by top experts in law, history, computer and information science - First comprehensive work in Information Security Unique, unchanging, and formed five months before birth, fingerprints have been an accepted and infallible means of personal identification for a century. In LIFEPRINTS, Richard Unger presents a groundbreaking method of self-discovery and offers a daily compass for meaning and fulfillment. Combining the science of dermatoglyphics (the study of fingerprints and related line and hand shape designations) with the ancient wisdom of palmistry, the LifePrints system is a simple yet profoundly accurate means of mapping one's life purpose. Like examining an acorn to know what kind of oak tree may one day emerge, reading our fingerprints reveals who we are meant to become. • A guide to discovering one's life purpose by decoding the map revealed in our unique combination of fingerprints. • This new system is based on the author's 25 years of research and fingerprint statistics for more than 52,000 hands. • Features step-by-step instructions for identifying the fingerprints and mapping the life lessons for reaching our full potential. • Includes detailed case studies plus fingerprint readings for Albert Einstein, John F. Kennedy, Amelia Earhart, Walt Disney, Susan B. Anthony, Martin Luther King, Charles Manson, and others. A guide to nourishing the body through bone marrow rejuvenation exercises • Presents exercises to "regrow" bone marrow, revive the internal organs, and prevent osteoporosis • Explains the use of bone breathing and bone compression, "hitting" to detoxify the body, and sexual energy massage and chi weight lifting to enhance the life force within Most Westerners believe that a daily physical exercise program helps slow the aging process. Yet those whose bodies appear most physically fit on the outside often enjoy only the same life span as the average nonathletic person. It is the internal organs and glands that nourish every function of the body, and it is the bone marrow that nourishes and rejuvenates the organs and glands through the production of blood. By focusing only on the muscles without cultivating the internal organs, bones, and blood, the Western fitness regimen can ultimately exhaust the internal system. In Bone Marrow Nei Kung Master Mantak Chia reveals the ancient mental and physical Taoist techniques used to "regrow" bone marrow, strengthen the bones, and rejuvenate the organs and glands. An advanced practice of Iron Shirt Chi Kung, Bone Marrow Nei Kung was developed as a way to attain the "steel body" coveted in the fields of Chinese medicine and martial arts. This method of absorbing energy into the bones revives the bone marrow and reverses the effects of aging through the techniques of bone breathing, bone compression, and sexual energy massage, which stimulates the hormonal production that helps prevent osteoporosis. Also included is extensive information on chi weight lifting and the practice of "hitting" to detoxify the body. This edited collection is an interdisciplinary study of gems in the early modern world. It examines the relations between the art, science, and technology of gems, and it does so against the backdrop of an expanding global trade in gems. The eleven chapters are organised into three parts. The first part sets the scene by describing how gems moved around the early modern world, how they were set in motion, and how they were pulled together in the course of their travels. The second part is about value. It asks why people valued gems, how they determined the value of a given gem, and how the value of a gem was connected to its perceived place of origin. The third part deals with the skills involved in cutting, polishing, and mounting gems, and how these skills were transmitted and articulated by artisans. The common themes of all these chapters are materials, knowledge and global trade. The contributors to this volume focus on the material properties of gems such as their weight and hardness, on the knowledge involved in exchanging them and valuing them, and on the cultural consequences of the expanding trade in gems in Eurasia and the Americas. Kerstin Fink discusses the two mainstream measurement fields: the cognitive science approach and the management approach. She develops the knowledge potential view which is determined by nine key measurement variables, i.e. content, culture, networking, organizational knowledge, learning and training, customer and competitor knowledge, and knowledge management systems. MacElrevey's Shiphandling for the Mariner, first published in 1983, is addressed primarily to the practicing mariner who already possesses some degree of professional knowledge, experience, and training. In a nontechnical style, and with illustrations, the author stresses maneuvers routinely used by working pilots and masters, with special attention to directional stability, shallow water effects, squat, and aids such as variable pitch propulsion, electronic reference instrumentation, and tractor tugs. All maneuvers used in docking, undocking, and shiphandling in restricted

waters are covered, as well as less common maneuvers: docking at single point and multiple buoy moorings, use of anchors in shiphandling, offshore lightering, and transiting of locks and canals. Building Sharjah reveals how modern architecture unfurled across the United Arab Emirates' third-largest city. An oil discovery in 1972 positioned Sharjah as one of the world's final cities shaped by transformative fortune. In the footsteps of Kuwait, Riyadh, and Dubai, Sharjah faced a metamorphosis: either one that repeated the past's mistakes or one that reimagined how wealth can build a city. Sharjah's potential enticed an international cast of experts to create a bold, new city. As their projects begin to vanish, this book preserves them through unseen photographs and recovered documents. New writing chronicles how local and arriving residents arranged the designed, concrete environment into a home. Beyond just a local artifact, this book examines the confident promises made by global practices of urbanization. Uehara never liked his classmate, Mizue. But, one summer day, they're both in the same detention session and for some reason he can't take his eyes off of him! Confused, Uehara didn't know what to make of this situation... until Mizue asks him to be his model for his art assignment. Mizue plays it off cool, but is he feeling what Uehara is feeling? Or is he just playing games? The Command to Look was one of William Mortensen's most influential and sought-after books, and has been out of print for fifty years. The Global Lives of Things considers the ways in which 'things', ranging from commodities to works of art and precious materials, participated in the shaping of global connections in the period 1400-1800. By focusing on the material exchange between Asia, Europe, the Americas and Australia, this volume traces the movements of objects through human networks of commerce, colonialism and consumption. It argues that material objects mediated between the forces of global economic exchange and the constantly changing identities of individuals, as they were drawn into global circuits. It proposes a reconceptualization of early modern global history in the light of its material culture by asking the question: what can we learn about the early modern world by studying its objects? This exciting new collection draws together the latest scholarship in the study of material culture and offers students a critique and explanation of the notion of commodity and a reinterpretation of the meaning of exchange. It engages with the concepts of 'proto-globalization', 'the first global age' and 'commodities/consumption'. Divided into three parts, the volume considers in Part One, Objects of Global Knowledge, in Part Two, Objects of Global Connections, and finally, in Part Three, Objects of Global Consumption. The collection concludes with afterwords from three of the leading historians in the field, Maxine Berg, Suraiya Faroqi and Paula Findlen, who offer their critical view of the methodologies and themes considered in the book and place its arguments within the wider field of scholarship. Extensively illustrated, and with chapters examining case studies from Northern Europe to China and Australia, this book will be essential reading for students of global history. This book reveals the secrets of master art forger Eric Hebborn, who fooled the art world for more than 20 years with hundreds of fake Old Masters. Drawings attributed to Bruegel, Piranesi, Corot and Augustus John were unmasked as Hebborn's work in 1980 by London journalist Geraldine Norman. In this book, Hebborn shows how he did it. Shortly before his death in 1996, Hebborn compiled this handbook, revealing the secrets of his techniques, and showing in the process a profound knowledge of the great draughtsmen/artists of the past. Inks, papers, pigments, monograms and signatures are all explained and illustrated, and the tale is told in a witty, entertaining and often outrageous style, as the artist speculates on the nature of art, truth and value. The Handbook of Information Security is a definitive 3-volume handbook that offers coverage of both established and cutting-edge theories and developments on information and computer security. The text contains 180 articles from over 200 leading experts, providing the benchmark resource for information security, network security, information privacy, and information warfare. Abandoned. Unwanted. Orphan. In a time of war between mankind and fae, no one ventures outside of the safety of the human kingdom. Abandoned in the furthest corner of Amnestia, in a convent long forgotten by most, Cress grows up thinking she's nothing more than a human of horrendous skill and grace. One moment, the quiet countryside of Amnestia where she's been raised her whole life is devoid of any danger and the next, it's there. Powered by a strange magical spell, a castle appears seemingly from nowhere. Ruled by a court of fae few humans had ever laid eyes on and lived to tell the tale, Cress stumbles right into the center of three royal princes. There, she discovers that perhaps she's not a human at all, but a changeling--a fae child left behind in the ancient tradition of an extinct court. In the face of possible execution, she better hope she's a fae, because the worst thing a girl can be in the court of crimson is human. Security threats are a significant problem for information technology companies today. This book focuses on how to mitigate these threats by using security standards and provides ways to address associated problems faced by engineers caused by ambiguities in the standards. The security standards are analysed, fundamental concepts of the security standards presented, and the relations to the elementary concepts of security requirements engineering (SRE) methods explored. Using this knowledge, engineers can build customised methods that support the establishment of security standards. Standards such as Common Criteria or ISO 27001 are explored and several extensions are provided to well-known SRE methods such as Si*, CORAS, and UML4PF to support the establishment of these security standards. Through careful analysis of the activities demanded by the standards, for example the activities to establish an Information Security Management System (ISMS) in compliance with the ISO 27001 standard, methods are proposed which incorporate existing security requirement approaches and patterns. Understanding Pattern and Security Requirements engineering methods is important for software engineers, security analysts and other professionals that are tasked with establishing a security standard, as well as researchers who aim to investigate the problems with establishing security standards. The examples and explanations in this book are designed to be understandable by all these readers.
