This volume comprises the compounds of thorium with the 4th main group elements silicon and germanium and all 5th main group elements except nitrogen. On the subject of ternary and polynary compounds containing oxygen, only those compounds with phosphorus are included (e.g., phosphates, hypophosphates, or phosphinates). Similar compounds of the other elements like silicates, arsenates, etc. were already treated in "Thorium" Suppl. Vol. C 2, 1976. Most of the compounds in the different systems treated in this volume are of scientific interest because of their special physical and chemical properties. On the other hand, there are also many compounds which are of specific technological interest, mainly in the nuclear field. Refractory compounds like ThSi or ThP have potential interest as nuclear fuel for special reactors due to their physical properties like good heat conductivity and their chemical stability, e.g., against the corrosion of cladding alloys for nuclear fuel elements. Due to the present situation in the further development of the thorium nuclear fuel cycle, their large potential has not yet been fully investigated. For most of the binary and ternary phases in these systems, we presently have good knowledge about the preparation of the compounds and their physical and chemical properties. But nevertheless, there are still a lot of open questions concerning phase equilibria, solid solutions, and homogeneity of some of the phases described in this volume. *Chromatographic & Electrophoretic Techniques, Fourth Edition, Volume I: Paper and Thin Layer Chromatography* presents the methods of paper and thin layer chromatography. This book discusses the practical approach in the application of paper and thin layer chromatography techniques in the biological sciences. Organized into 18 chapters, this edition begins with an overview of the clinical aspects related to the detection of those metabolic diseases that can result in serious illness presenting in infancy and early childhood. This text then discusses the three major types of screening for inherited metabolic disorders in which paper or thin-layer chromatography are being used, including screening the healthy newborn population, screening the sick hospitalized child, and screening mentally retarded patients. Other chapters consider the procedures for thin layer chromatography. This book discusses as well the complexity of amino acid mixtures

present in natural products. The final chapter deals with the detection of synthetic basic drugs. This book is a valuable resource for chemists and toxicologists. Vols. for 1898-1968 include a directory of publishers. For more than three decades the Electroanalytical Chemistry Series has delivered the most in-depth and critical research related to issues in electrochemistry. Volume 24 continues this gold-standard with practical reviews of recent applications as well as innovative contributions from internationally respected specialists who highlight the emergence of new technologies and trends in the field.

Crossroads and Cultures: A History of the World's Peoples incorporates the best current cultural history into a fresh and original narrative that connects global patterns of development with life on the ground. As the title, "Crossroads," suggests, this new synthesis highlights the places and times where people exchanged goods and commodities, shared innovations and ideas, waged war and spread disease, and in doing so joined their lives to the broad sweep of global history. Students benefit from a strong pedagogical design, abundant maps and images, and special features that heighten the narrative's attention to the lives and voices of the world's peoples. The North-West Semitic epigraphic contributes considerably to our understanding of the Old Testament and of the Ugaritic texts and to our knowledge of the North-West Semitic languages as such. This dictionary is concerned with the North-West Semitic material found in inscriptions, papyri and ostraca in Phoenician, Punic, Hebrew, various forms of Aramaic, Ammonite, Edomite, the language of Deir Alla et cetera. The material covers the period from ca. 1000 B.C. to ca. 300 A.D. Besides translations the entries include discussions and full references to scholarly literature. The book is a translated, updated and considerably augmented edition of Jean & Hoftijzer, "Dictionnaire des inscriptions semitiques de l'ouest," The additions concern newly found texts as well as references to new scholarly literature. The book is an indispensable tool for research in North-West Semitic epigraphy, on the Old Testament and on Ugaritic texts, and for Semitic linguistics. Sample Text This second book in the three-volume *Plant Secondary Metabolites* covers the stimulation, extraction, and utilization of plant secondary metabolites, which are organic compounds that aid in the growth and development of plants but which are not required for the plant to survive by fighting off herbivores, pests, and pathogens. These plant secondary metabolites have been used since early times in various medicines and food products for beneficial health purposes and are still relevant and popular today. *A History of World Societies* introduces students to the global past through social history and the stories and voices of the people who lived it. Now published by Bedford/St. Martin's, and informed by the latest scholarship, the book has been thoroughly revised with students in mind to meet the needs of the evolving course. Proven to work in the classroom, the book's regional and comparative approach helps students understand the connections of global history while providing a manageable organization. With more global connections and comparisons, more documents, special features and activities that teach historical analysis, and an entirely new look, the ninth edition is the most teachable and accessible edition yet. (follow the link on the right hand side of this page). The purpose of Volume C is to provide the mathematical, physical and chemical information needed for experimental studies in structural crystallography. The volume covers all aspects of experimental techniques, using all three principal radiation types, from the selection and mounting of crystals and production of radiation, through data collection and analysis, to interpretation of results. As such, it is an essential source of information for all workers using crystallographic techniques in physics, chemistry, metallurgy, earth sciences and molecular biology. This volume collects ten surveys on the modeling, simulation, and applications of active particles using methods ranging from mathematical kinetic theory to nonequilibrium statistical mechanics. The contributing authors are leading experts working in this challenging field, and each of their chapters provides a review of the most recent results

in their areas and looks ahead to future research directions. The approaches to studying active matter are presented here from many different perspectives, such as individual-based models, evolutionary games, Brownian motion, and continuum theories, as well as various combinations of these. Applications covered include biological network formation and network theory; opinion formation and social systems; control theory of sparse systems; theory and applications of mean field games; population learning; dynamics of flocking systems; vehicular traffic flow; and stochastic particles and mean field approximation. Mathematicians and other members of the scientific community interested in active matter and its many applications will find this volume to be a timely, authoritative, and valuable resource. This one-hundredth volume of *Studia Patristica* includes papers from the Sixth British Patristics conference, held in Birmingham in September 2016. Thirty-seven contributions from an international range of scholars provide new studies of many of the major subjects in patristic studies, from Tertullian to Maximus the Confessor by way of Origen, John Chrysostom, Jerome and Augustine. One theme of the conference, which was held in conjunction with the European Research Council COMPAUL project, was the tradition and reception of the letters of the Apostle Paul. This is reflected in several papers, including an examination of patristic evidence for the authorship of Ephesians and an analysis of exegetical techniques employed in the Greek catena tradition on Galatians. Two longer contributions, by plenary speakers Frances Young and Jennifer Strawbridge, offer an extended consideration of the early Christian exegesis of particular Pauline Epistles. This work traces the decline of Greek religion and christianization of the Eastern Roman Empire between the death of Julian the Apostate and the legislation of Justinian the Great against paganism. It treats both urban and rural affairs, with particular emphasis on interpreting the epigraphy. Now from Bedford/St. Martin's, *A History of Western Society* is one of the most successful textbooks available because it captures students' interest in the everyday life of the past and ties social history to the broad sweep of politics and culture. The tenth edition has been thoroughly revised to strengthen the text's readability, heighten its attention to daily life, and incorporate the insights of new scholarship, including an enhanced treatment of European exploration and a thoroughly revised post-1945 section. With a dynamic new design, new special features, and a completely revised and robust companion reader, this major revision makes the past memorable and accessible for a new generation of students and instructors. Volume 2 of *The Cambridge Economic History of India* covers the period 1757-1970, from the establishment of British rule to its termination, with epilogues on the post-Independence period. Nine years ago, W. W. Norton changed the way world literature is taught by introducing *The Norton Anthology of World Masterpieces, Expanded Edition*. List of fellows for 1908- in v. 25. Section-I: Solid State Physics | Section-Ii Electronics | Section-Iii: Nuclear And Particle Physics Vol. 12 includes under the same cover the society's year-book for 1912. Surfactants play a critical role in Tribology controlling friction, wear, and lubricant properties such as emulsification, demulsification, bioresistance, oxidation resistance, rust prevention and corrosion resistance. This is a critical topic for new materials and devices particularly those built at the nanoscale. This newest volume will address tribological properties of cutting fluids, lubricant performance related to steel surfaces, biolubricants, and novel materials and ways to reduce friction and wear. Scientists from industrial research and development (R&D) organizations and academic research teams in Asia, Europe, the Middle East and North America will participate in the work. Showcasing texts by Portuguese and Luso-Brazilian authors, this volume demonstrates the wealth of the political thought of early modern Portugal and its empire. Gathering together important texts on social order, government, and politics by authors who made a significant contribution to the development of early modern Portugal, it demonstrates that Portugal was the setting for vibrant political debate, often shaped by, and emerging in response to, very particular assumptions, circumstances, and concerns. Combining a chronological approach with in-depth thematic sections, the book explores how

some controversies that took place in Portugal centred on themes similar to those in other European countries, while others were linked to the specific nature and history of the Portuguese monarchy and its interactions with other polities. It thus offers an overview of the main debates on politics and government and contributes to a more nuanced understanding of the multifaceted history of European political ideas.
