The global economic crisis has catalysed debates about the merits of capitalism as a system for organizing production, distribution and exchange. Political elites have argued that capitalism is not fundamentally pernicious or crisis-prone and can be successfully reformed with the right set of policies. Conversely, many have argued that a wholesale change of attitude towards the status and creation of wealth in contemporary society is required if crises of this kind are to be prevented in the future. In *Capitalism and Its Alternatives*, Chris Rogers provides a critical introduction to theories of capitalism and to the forms of its crises in historical and contemporary contexts, as well as reflecting on the practice of anti-capitalism and

the ways that economic and social relations are shaped, reshaped and resisted. Crucially, the book asks two key questions: What alternatives to capitalism exist? And by what processes and through what institutions might they be achieved? A collection of studies in applied linguistics

Gender equality in science is a major challenge for higher education systems, which are facing many constraints. This book presents some of the latest research findings from Germany, South Africa and Austria on women ' s careers in science and research. The volume provides insights into the research system from a female career perspective, and highlights the lessons women can learn from the findings in order to promote their own careers. Following on from the successful first edition (March 2012), this book gives a clear explanation of what LTE does and how it works. The content is expressed at a systems level, offering readers the opportunity to grasp the key factors that make LTE the hot topic amongst vendors and operators across the globe. The book assumes no more than a basic knowledge of mobile telecommunication systems, and the reader is not expected to have any previous knowledge of the complex mathematical operations that underpin LTE. This second edition introduces new material for the current state of the industry, such as the new features of LTE in Releases 11 and 12, notably coordinated multipoint transmission and proximity

services; the main short- and long-term solutions for LTE voice calls, namely circuit switched fallback and the IP multimedia subsystem; and the evolution and current state of the LTE market. It also extends some of the material from the first edition, such as inter-operation with other technologies such as GSM, UMTS, wireless local area networks and cdma2000; additional features of LTE Advanced, notably heterogeneous networks and traffic offloading; data transport in the evolved packet core; coverage and capacity estimation for LTE; and a more rigorous treatment of modulation, demodulation and OFDMA. The author breaks down the system into logical blocks, by initially introducing the architecture of LTE, explaining the techniques used for radio transmission and reception and the overall operation of the system, and concluding with more specialized topics such as LTE voice calls and the later releases of the specifications. This methodical approach enables readers to move on to tackle the specifications and the more advanced texts with confidence.

European cities increasingly face problems caused by transport and traffic. For many people transport provision is unsatisfactory and current arrangements are leading to a deteriorating environment. A fundamental problem is that our currently fragmented approach makes it difficult to understand fully the circumstances and needs of transport users. In any overall approach public

transport is a crucial component. Designing Mobility and Transport Services shows how these issues can be addressed and resolved. The development of an inclusive, validated passenger experience measurement instrument is the first step in understanding the situation and thus tackling it. It is needed if we are to create high quality, user centred, integrated, accessible public transport services, which are capable of attracting and retaining public transport users whilst meeting sustainability targets. The METPEX research project was devised to tackle these issues. Coordinated by Coventry University, the METPEX consortium brought together 16 European partners from 12 countries. The project 's underlying rationale was the proposition that if transport operators and authorities were provided with a robust, reliable and tailorable means of measuring the whole multimodal passenger journey, they could improve service provision. The book describes how such an improvement can be achieved, to attract travellers out of their private vehicles, thereby reducing congestion and pollution and increasing health and well-being. It provides a template for a creative approach and a meta-design narrative in designing for transport systems to enhance mobility choices by improving the door to door journey and thus underpin sustainable transport initiatives. This fourteenth volume of India 's National Security Annual Review intensively

analyses India ' s national security with respect to the changing internal and external dynamics. In the global environment, the situation is characterised by rising tensions between United States and Russia, intensified rivalry between United States (US) and China, and increasing cooperation between China and Russia. For India which seeks peaceful growth to emerge as a major power, this poses severe diplomatic challenges. This volume discusses the complexity of these challenges and the deftness with which India gets the best out of its strategic partnerships with the US and Russia while warding off the transgressions of a mighty adversary like China. It also studies the impact of internal convulsions and external intrusions on India ' s security from South Asian nations such as Afghanistan, Bangladesh, Nepal and Sri Lanka. Examining the field of internal security, the essays carry rare insights into the causes of expansion of Naxalite violence in tribal areas and the dynamics of conflict resolution in the Northeast, as well as India ' s deep concern as a growing power with its economic slowdown in the recent past, and energy and cyber security. Bringing together contributions from eminent scholars and diplomats, the volume will be indispensable for policymakers, government think tanks, defence and strategic studies experts, as well as students and researchers of international relations, foreign policy and political

science. “ There was a reason why Lucifer and his followers believed their assault on Heaven could succeed. There is a reason why the city of Sanctuary remains hidden... ” The words spoken by the Facet Angel millennia ago have plunged No Argentar and the other members of the Faction into a world of mystery. The dark gods are maneuvering silently towards an unthinkable goal, but will the Faction be their adversary or their unwitting tool? The Anaii, an alien race dwelling in Sanctuary, have chosen to reveal themselves fully to Sabrina. Through their story, she becomes aware of a link between their history, the origins of the dark gods, and her own evolving powers. All of Creation awaits her true awakening. Even as No struggles to maintain unity and discipline within the Faction, the group of heroes find themselves swept up in the war between Good and Evil that is consuming the world around them, and unforeseen battles threaten to scatter the Faction forever. In a landscape of vengeance and betrayal, the remnant of the Faction must risk everything as the dark gods finally make their move. But the ultimate victory weighs balanced in the heart of the greatest Spirit Warrior in history - Walter Wilson. In accordance with Article 102 of the Charter and the relevant General Assembly Resolutions, every treaty and international agreement registered or filed and recorded with the Secretariat since 1946 is published in the United

Nations Treaty Series. At present, the collection includes about 30,000 treaties reproduced in their authentic languages, together with translations into English and French, as necessary.

Iran Mining Laws and Regulations Handbook Volume 1 Strategic Information and Basic Laws This book explores the scope, application and role of medical law, regulatory norms and ethics, and addresses key challenges introduced by contemporary advances in biomedical research and healthcare. While mindful of national developments, the handbook supports a global perspective in its approach to medical law. Contributors include leading scholars in both medical law and ethics, who have developed specially commissioned pieces in order to present a critical overview and analysis of the current state of medical law and ethics. Each chapter offers comprehensive coverage of longstanding and traditional topics in medical law and ethics, and provides dynamic insights into contemporary and emerging issues in this heavily debated field. Topics covered include: Bioethics, health and human rights Medical liability Law and emerging health technologies Public health law Personalized medicine The law and ethics of access to medicines in developing countries Medical research in the genome era Emerging legal and ethical issues in reproductive technologies This advanced level reference work will prove invaluable to legal practitioners, scholars,

students and researchers in the disciplines of law, medicine, genetics, dentistry, theology, and medical ethics. Social Finance brings together rapid advances in what used to be called socially responsible investment. For example, finance for green businesses, and to support economic development both in deprived areas and developing countries. This book is the first serious and comprehensive treatment of the phenomenon. (Quelle: buch.ch)

Whether out of historical interest, romantic identification with the colonized or as models for contemporary counter-insurgency experts, the mass violence of insurgency and counter-insurgency in the post-war decolonization of the European empires has long exerted an intense fascination. In the main, the dramas in French Algeria and British Kenya in the 1950s have dominated the scene, overshadowing the equally violent events that unfolded in the Dutch, Belgian and Portuguese empires. Colonial counterinsurgency and mass violence is the first book in English to treat the intense conflict that occurred during the ' Indonesian revolution ' —the decolonization struggle of the Dutch East Indies between 1945 and 1949. This case is particularly significant as the first episode of post-war colonial violence, indeed one with global reverberations. International opinion was ranged against the Dutch, and the nascent United Nations condemned its euphemistically termed ' police

actions ' to reclaim the archipelago from Indonesian nationalists after defeat by the Japanese in 1942. As this book makes clear, however, intra-Indonesian violence was no less prevalent, as rival independence visions vied for control and villagers were caught between the fronts. Taking a multi-perspectival approach, eighteen authors examine the origins of the conflict as well as its representational and memory dimensions. Colonial counterinsurgency and mass violence will appeal to scholars of imperial history, mass violence and memory studies alike. This book is based on a special issue of the Journal of Genocide Research. Today, the Internet has become a source of information that no country or company can forgo. It is not only used to communicate or entertain, but most importantly to operate utilities and public services such as banking or air traffic. As the reliance on computer networks across societies and economies keeps growing, so do security risks in cyberspace - referred to as "cybersecurity." Cybersecurity means protecting information and control systems from those who seek to compromise them. It also involves actors, both malicious or protective, policies and their societal consequences. This collection of essays provides a better understanding of the risks, perceptions, and myths that surround cybersecurity by looking at it from three different levels of analysis: the sovereign state, the

infrastructure and stakeholders of the Internet, and the individual. The essays explore such issues as information ownership, censorship, cyberwars, cyberterrorism, privacy, and rebellion, bringing together expert knowledge from computer science and the social sciences with case studies. It reviews existing policies and practices and discusses the threats and benefits of living in an increasingly networked world. This authoritative analysis of one of the most controversial and compelling security debates of the twenty-first century will appeal to scholars and practitioners interested in security, international relations and policymaking. Exploring the advantages and disadvantages of codifying contract law, this book considers the question from the perspectives of both civil and common law systems, referring in detail to issues of international and consumer law. With contributions from leading international scholars, the chapters present a range of opinions on the virtues of codification, encouraging further debate on this topic. The book commences with a discussion on the internationalization imperative for codification of contract law. It then turns to regional issues, exploring first codification attempts in the European Union and Japan, and then issues relevant to codification in the common law jurisdictions of Australia, New Zealand and the United States. The collection concludes with two

chapters which consider the need to draw upon both private and comparative international law perspectives to inform any codification reforms. This book will be of interest to international and comparative contract law academics, as well as regulators and policy-makers.

Explores the central role the aesthetic played in energising the massive mobilisations of young people, the disaffected, the middle classes and the apolitical silent majority in the North African and Middle Eastern uprisings with protest movements such as Bloomfield charts India ' s profoundly ambiguous engagement with the thorny problem of protecting vulnerable persons from atrocities without fatally undermining the sovereign state system, a matter which is now substantially shaped by debates about the responsibility to protect (R2P) norm. Books about India ' s evolving role in world affairs and about R2P have proliferated recently, but this is the first to draw these two debates together. It examines India ' s historical responses to humanitarian crises, starting with the 1971 Bangladesh Liberation War, concentrating on the years 2011 and 2012 when India sat on the UN Security Council. Three serious humanitarian crises broke during its tenure - in Côte d'Ivoire, Libya and Syria - which collectively sparked a ferocious debate within India. The book examines what became largely a battle over ' what sort of actor ' modern India is, or should be, to determine

how this contest shaped both India ' s responses to these humanitarian tragedies and also the wider debates about rising India ' s international identity. The book ' s findings also have important (and largely negative) implications for the broader effort to make R2P a recognised and actionable international norm. Based on a unique comparative study of Burundi, Rwanda, Ethiopia, Lebanon, Bosnia-Herzegovina, Nepal, Myanmar, the Philippines, and Fiji this book analyses the formal and informal arrangements defining the post-conflict political order in these countries and evaluates whether these systems strengthened or weakened the chances of establishing sustainable peace and lasting democracy. What can be learned from these cases? Each country has its unique history but they are faced with comparable challenges and dilemmas in building a democratic future. Which solutions seem to contribute to democratic stability and which do not? These questions are discussed in light of theoretical literature, case studies, and field interviews with the authors concluding that systems based on proportional representation offered the best prospects for including diverse and conflicting identities and building unified political systems. The book is of particular interest to students of democracy and peace-building; academics as well as decision-makers and practitioners in the field. This report evaluates the comprehensive labour market

reforms undertaken in Portugal in 2011-15. It reviews reforms in employment protection legislation, unemployment benefits, activation, collective bargaining, minimum wages and working time, and assesses the available evidence on their impact.

AIRCRAFT PROPULSION The international law on the use of force is one of the oldest branches of international law. It is an area twinned with the emergence of international law as a concept in itself, and which sees law and politics collide. The number of armed conflicts is equal only to the number of methodological approaches used to describe them.

Many violent encounters are well known. The Kosovo Crisis in 1999 and the US-led invasion of Iraq in 2003 spring easily to the minds of most scholars and academics, and gain extensive coverage in this text.

Other conflicts, including the Belgian operation in Stanleyville, and the Ethiopian Intervention in Somalia, are often overlooked to our peril. Ruys and Corten's expert-written text compares over sixty different instances of the use of cross border force since the adoption of the UN Charter in 1945, from all out warfare to hostile encounters between individual units, targeted killings, and hostage rescue operations, to ask a complex question. How much authority does the power of precedent really have in the law of the use of force? As Eurasia and the adjacent territories become

more important to the world, there is increasing interest from international powers, accompanied by attempts to give institutional form to traditional economic and security links within the region. This book includes a range of substantive work from scholars based in the region, offering contrasting perspectives on the process of Eurasian integration and its place in the world. Chapters consider economic, political, social and security developments, with notable studies of the major countries involved in the development of the Eurasian Economic Union. The work also examines the connections between the region and China, greater Asia and the European Union. It outlines the varying dynamics, with populations growing in Central Asia while at best stagnant elsewhere. The book discusses the increasing strategic significance of the region and explores how the new post-Soviet states are growing in national cohesion and political self-confidence. Above all, the book examines the concept of 'Eurasia', outlining the debates about the concept and how various aspects of the legacy of 'Eurasianism' contribute to contemporary plans for integration. The book argues that although regional integration is very much a popular idea in our age, with the potential for economic benefits and increased international influence, in practice contemporary projects for Eurasian integration have been highly ambiguous and contested.

Nevertheless, significant steps have been taken towards the creation of the Eurasian Economic Union. The book analyses developments to date, noting the achievements as well as the challenges. Iran Business Law Handbook - Strategic Information and Basic Laws Vision is about insight, and visual perception is about cognition - and they form the foundation of how we see the world. Duco A. Schreuder, a physicist and psychologist, explores the finer details of each in this groundbreaking book that explores human consciousness and perception. Sharing virtually everything he's learned over a varied career spanning more than sixty years, he examines a wide array of topics, including how we understand what we visually process, how we store and retrieve information, the role that neurons play in how what we see, and much more. While Schreuder isn't afraid to disagree with other leading thinkers, he relies on science and focuses on the facts behind it so you can understand lighting, visual perception, engineering design, and applied and experimental physics. Looking is about insight, whereas seeing is about knowledge, and you need to know how each one works to truly understand how humanity views the world. Whether you're an illuminating engineer considering the fundamentals of the trade or a student or professional in an allied discipline, you'll be well served by taking a closer look at Vision and Visual Perception. A Monetary Hope for

Europe. This book studies the euro in a global perspective and opens a new series edited by the Jean Monnet European Centre of Excellence of the University of Florence, *Verso l'unificazione europea*. Most of the chapters have been written by economists who met and discussed their diverse views at a multi-disciplinary conference organized by the Centre in May 2013 under the title *The euro and the struggle for the creation of a new global currency: Problems and perspectives in the building of the political, financial and economic foundations of the European federal government*. The list of contributors also includes historians as well as European and international law academics. Their essays have been revised on the basis and against the backdrop of an ongoing crisis of both the euro and the whole European project in the last years and months. The volume aims to provide useful data and interpretations to improve knowledge on the euro and the European Union in their economic, historical, juridical and political perspectives. -- The European Neighbourhood Policy (ENP) was initially intended to create ' a ring of friends surrounding the Union, from Morocco to Russia and the Black Sea ' (Prodi, 2002). Today, however, the ever-worsening security situation in the region clearly shows that the aim has not been achieved. With wars in Ukraine, Syria and Libya, the Union ' s neighbourhood can therefore better be

described as ‘ a ring of fire ’ . Does this mean that the policy has failed and that an alternative policy towards the EU ’ s neighbours is needed? Or should these developments be seen as temporary setbacks caused by external factors beyond EU control? By comparing the EU ’ s approach to its eastern and southern neighbours, this volume seeks to answer such overarching questions. The authors find that the EU still has a potential role to play in providing regional security, but that this role also risks being increasingly undermined if it does not increasingly take into account the broader geostrategic realities in both regions. The top job is within Bill Shorten ’ s grasp. But who is he? How did he rise to become Labor leader? And does he have what it takes to lead the country? In this dramatic essay, David Marr traces the hidden career of a Labor warrior. He shows how a brilliant recruiter and formidable campaigner mastered first the unions and then the party. Marr presents a man willing to deal with his enemies and shift his allegiances, whose ambition to lead has been fixed since childhood. But does he stand for anything? Is Shorten a defender of Labor values in today ’ s Australia or a shape-shifter, driven entirely by politics? How does the union world he comes from shape the prime minister he might be? Marr reveals a man we hardly know: a virtuoso with numbers and a strategist of skill who Labor hopes will return the party

to power. “ Australians distrust Shorten almost as much as they distrust Abbott. That ’ s why this election will be fought on trust. It ’ s going to be dirty. At the heart of the contest will be Shorten ’ s character. All the way to polling day, Australians will be invited to rake over every detail of his short life and hidden career. ”

Updated Annually. *US-Iran Political & Economic Relations Handbook* This is the inside story of private equity dealmaking. Over the last 40 years, LBO fund managers have demonstrated that they are good at making money for themselves and their investors. But when one looks beneath the surface of the transactions they engineer, it is apparent that these deals can, at times, go spectacularly wrong. Through 14 business stories, all emanating from the noughties' credit bubble and including headline-grabbing names like Caesars, Debenhams, EMI, Hertz, Seat Pagine Gialle and TXU, *The Debt Trap* shows how, via controversial practices like quick flips, repeat dividend recaps, heavy cost-cutting and asset-stripping, leveraged buyouts changed, for better or for worse, the way private companies are financed and managed today. From technological disruption in the worlds of music recording and business-directory publishing to economic turbulence in the gambling, real estate and energy sectors, highly levered corporations are often incapable of handling

market corrections when debt commitments start piling up. Behind the historical events and the financial empires erected by some of the elite private equity specialists, these 14 in-depth case studies examine how value-maximising techniques and a short-cut mentality can impact investment returns and portfolio assets. Whether you are a PE practitioner, investor, business manager, academic or business student, you will find *The Debt Trap* to be an authoritative and fascinating account. The future engagement of young citizens from a wide range of socio-economic, ethnic and cultural backgrounds in democratic politics remains a crucial concern for academics, policy-makers, civics teachers and youth workers around the world. At a time when the negative relationship between socio-economic inequality and levels of political participation is compounded by high youth unemployment or precarious employment in many countries, it is not surprising that new social media communications may be seen as a means to re-engage young citizens. This edited collection explores the influence of social media, such as YouTube, Facebook, and Twitter, upon the participatory culture of young citizens. This collection, comprising contributions from a number of leading international scholars in this field, examines such themes as the possible effects of social media use upon patterns of political socialization; the potential of social

media to ameliorate young people ' s political inequality; the role of social media communications for enhancing the civic education curriculum; and evidence for social media manifesting new forms of political engagement and participation by young citizens. These issues are considered from a number of theoretical and methodological approaches but all attempt to move beyond simplistic notions of young people as an undifferentiated category of ' the internet generation ' . This book argues for a balanced approach to ' greening ' the World Trade Organization (WTO) ban on China ' s export duties without opening the floodgates to protectionism. As a result of the China—Raw Materials and China—Rare Earths decisions, China is largely prohibited from using export duties to address environmental problems, including those associated with climate change. This is despite a number of climate studies having suggested that Chinese export duties could be useful for reducing carbon leakage, an issue of international concern. This book puts the case for a more balanced approach. It shows that a harsh ban on China ' s export duties constrains its policy space to protect the environment, particularly in the context of climate change. The work presents feasibility tests for various legal solutions that have been discussed for adjusting the ban, and it accordingly proposes a more feasible approach that

would allow China to help protect the environment without advancing protectionism. The proposed legal option provides a less protectionist alternative to export duties, namely ' export duties plus ' : export duties in combination with supplementary restrictions on Chinese consumption. This analysis also yields insights regarding ways to correct WTO precedents, which suggests a moderate alternative response to an important issue behind the Appellate Body crisis. The book will be a valuable resource for academics, researchers and policymakers in the areas of International Trade Law, Environmental Law and China.

In May 2010, Labour suffered one of its worst ever election defeats. A few months later it chose Ed Miliband as its new leader. His task? To win back power after just one term in opposition - a tall order given how many voters had come to blame Labour for the economic mess the country was in, and to see the party as a soft-touch when it came to immigration and welfare. Even those who were more sympathetic had their doubts. Was Ed Miliband really leadership material? Would he be able to overcome defeating his elder brother to get to the top? Would he have to do as he was told by the trade union leaders who had helped him win? Could he resolve the tensions between Blairites and Brownites, Blue Labour and New Labour? Might his desire to keep his colleagues united mean

Labour stayed stuck in its comfort zone? Would he, in seeking to break from the party's recent past, take it too far to the left? Could he offer the electorate something really radical in 2015 or would he instead choose something safer but ultimately less inspiring? And what should twenty-first social democracy look like now that the money had run out? This book, by one of the country's foremost experts on party politics, seeks to answer all those questions and, in the run up to the 2015 general election, to ask one more: will Ed Miliband's five year mission turn out to be 'mission impossible'? Under the governments of Lula da Silva and Dilma Rousseff, Brazil aimed at creating a global market for ethanol as a green transport fuel, and ethanol diplomacy became a signature component of Brazil ' s international insertion at the time. This study examines Brazil ' s international ethanol strategy and creates a comprehensive overview of the theoretical and practical approaches that Brazil undertook to promote ethanol as a tool to achieve energy security and combat climate change in a framework of South-South cooperation.
