Phospholipase A2 in Clinical InflammationMolecular Approaches to Pathophysiology Dec 05 2021 Phospholipase A2 in Clinical Inflammation presents an up-to-date topical review of the biochemistry, molecular biology, and biology of mammalian phospholipase A2 (PLA2). The emphasis of this monograph is on the current aspects of PLA2 research using molecular approaches to investigate PLA2 structure and function, inhibitor design, and the regulation of sPLA2 and cPLA2 in cellular systems. The second section examines the major disease states where PLA2 has been implicated: rheumatoid diseases; acute pancreatitis; and psoriasis. These chapters, contributed by experts in the field, give the reader an overall sense of the clinical relevance of the molecular approaches to study PLA2 in relation to the disease entities that may be associated with altered PLA2 levels and activity. This comprehensive text not only provides the necessary historical review for beginning researchers but also addresses the more current molecular approaches as well as the major disease states for the seasoned researcher.

Strategic A2/AD in Cyberspace Mar 28 2021 Strategic A2/AD in Cyberspace focuses on exclusion from cyberspace, or the ability of a state to be cut off entirely from cyberspace. Strategic anti-access and area denial (A2/AD) operations are common in other domains, but, before now, they have not been examined for their relevance to cyberspace. This book examines how strategic A2/AD operations can cut off states from cyberspace through attacks at either the physical or logic layers of cyberspace. The result of strategic cyber A2/AD operations could be catastrophic for modern economies, governments, military forces, and societies, yet there has been surprisingly little study of these threats to states' access to cyberspace. This book examines the implications of strategic cyber A2/AD operations for deterrence strategy and proposes a new view of how exclusion from

cyberspace can be used as a coercive tool in diplomacy.

Biochemistry, Molecular Biology, and Physiology of Phospholipase A2 and Its Regulatory Factors May 30 2021 During the past decade there has been a dramatic expansion of our knowledge on phospholipases in general, and phospholipase A2 (PLA2) in particular. Progress in this field has been evident on many fronts, with novel information rapidly accumulating in the literature regarding the chemistry and molecular biology of this enzyme and its role in many important physiological processes. These include cellular signal transduction via the G-protein cycle, and in the generation of many cellular mediators, such as the platelet activating factor (PAF) and the eicosanoids that participate in the initiation and propagation of inflammation, to mention a few. This symposium was organized to obtain an overview of current investigations on this enzyme from the standpoint of its chemistry, molecular biology and physiology. Another important focus of this symposium concerns the regulation of PLA2, including endogenous and synthetic inhibitors and activators of this enzyme. To review these important areas in PLA2 research we invited scientists who made significant contributions in this field. The papers in this volume are organized to emphasize the recent advances in several areas of investigation, including: (1) the structure and mechanism of action of PLA2, (2) mechanism of activation of PLA2, (3) molecular biology, physiology and endogenous inhibitors of this enzyme and finally, (4) clinical investigations emphasizing the pathophysiological role of this enzyme in human diseases. The first article in this

volume is by Dr.
