The Railway Research Institute (Instytut Kolejnictwa) in Warsaw was established in 1951 and was, until 2000, part of the Polish State Railways (PKP). At present, it serves as an independent entity, it is subordinated to the minister responsible for transport. Since its inception, the Institute has been the centre of competence for technology, technique and organization of operation and services in rail transport, particularly in respect to innovation. One of its fundamental tasks also includes activities connected with safety which are carried out in close cooperation with the National Safety Authority, i.e. the Office of Rail Transport. At the same time the Institute participated in the process of upgrading and modernization of the rail network in Poland. Experience in high speed rail, gained as a result of international cooperation and basing on the effort to increase speed on railway lines in Poland (so far 200 km/h), is included in the monograph "Koleje Dużych Prędkości w Polsce" (High Speed Rail in Poland) published in 2015 for the benefit of the Polish reader. This monograph aims at reaching an international audience of experts so as to present Polish determinants of HSR implementation. In order to elaborate this monograph, apart from specialists from the Railway Research Institute, experts from other research and academic centres were invited. Not only presenting a

wide range of problems connected with future construction of High Speed Lines in Polish conditions, but also a number of operational ones. The authors have created a reference work of universal character, solving problems in order to build and operate high speed rail systems in countries on a similar level of development as Poland. Features: providing requirements for design and upgrade of engineering works on High Speed Rail development information on restructuring and building railway lines for countries starting to develop a High Speed Rail system dealing with organizational, engineering, socioeconomic and economic demands for transport services and the formation of human resources for constructing and operating a High Speed Rail system. Presenting these problems on the international arena will facilitate future cooperation and application of world experience to create HSR in Poland and integrate the Polish HSR network into the international one. This eBook is a collection of poster abstracts presented at the AACC 2015 Annual Meeting. As the leading event for laboratory medicine worldwide, the AACC Annual Meeting & Clinical Lab Expo is the place where breakthrough innovations in clinical testing and patient care are introduced to the healthcare world. Engineers and scientists frequently find themselves having to get involved in electronic circuit design even though this may not be their specialty. This book is specifically designed for these situations, and has two major advantages for the inexperienced designer: it assumes little prior knowledge of electronics and it takes a modular approach, so you can find just what you need without working through a whole chapter. The first three parts of the book start by refreshing the basic mathematics and physics needed to understand circuit design. Part four discusses individual components (resistors, capacitors etc.), while the final and largest section describes commonly encountered circuit elements such as differentiators, oscillators, filters and couplers. A major bonus and learning aid is the inclusion of a CD-ROM with the student edition of the PSpice simulation software, together with models of most of the circuits described in the book. Over 1,100 businesses list with the SURPLUS RECORD. June 2022 issue. Vol. 99, No. 6 Corporate entrepreneurship involves new business creation within established companies, the strategic renewal of existing business, and, ultimately, the search for sustainable competitive advantage in an increasingly globalised economy. Yet it remains elusive for many firms. In a collaboration between a practitioner and academic, Joe J. Amberg and Sara L. McGaughey explore corporate entrepreunering within a large conglomerate multinational enterprise: Siemens AG. In early 2009, following a prolonged period of business stagnation and a huge bribery scandal, Siemens' top management identified a severe lack of entrepreneurship as a critical issue. The strengthening of 'local entrepreneurship' became a new priority in the strategic planning for 2010 to 2014. By examining three contrasting ventures in the Siemens business unit Fire Safety between 2008 and 2012, the authors identify key drivers and impediments that sustain inertia in corporate entrepreunering within this global organisation. This study offers an insightful contribution to our growing - yet still fledgling - understanding of corporate entrepreneurship in global corporations, highlighting the importance of context, interdependencies between critical factors, and the false promise of universal best practice. Published in 1882-5, this two-volume work, illustrated throughout, appeared when electric lighting was a fresh and propitious technological development. This is the second volume to appear in English of Mr Heerding's magisterial history of N. V. Philips' Gloeilampenfabrieken, first published in The Netherlands in 1986. It traces the growth and development of the firm from its establishment in 1891 until the retirement of Gerard Philips in 1922. This was a period of dramatic worldwide expansion, and Mr Heerding's vivid account assesses not merely the indigenous factors behind the company's success - notably its production system and marketing expertise - but also the wider technological developments that were shaping the lamp industry generally. Mr Heerding shows how from its earliest days Philips pursued a vigorous export policy bringing it into conflict with entrenched interests in Germany and North America in particular, and was thus able to survive when many of its competitors were floundering. Mr Heerding analyses the long struggle against the German Patentgemeinschaft, and Philips' extensive American involvement, culminating in lengthy negotiations with General Electric: the study provides an illuminating example of how a small company, building on the personal strengths of its founders, can in fact establish itself within a market dominated by monopolies and cartels. As with Volume 1, Mr Heerding provides far more than just the internal history of one company, examining in detail the socio-economic structure of Eindhoven, the Catholic provincial town that was to become the world headquarters of the Philips organisation. He shows how forms of profit-sharing, housing and educational schemes were progressively introduced, as the company, from being a

suspiciously watched outsider, became the dominant presence in the town. Sadly, Mr Heerding died shortly after completion of Volume 2 of the Dutch edition: this English impression should make a fitting memorial to one of the foremost Dutch business historians of recent times.
