Family, Class, and Ideology in Early Industrial France Sep 01 2020 "Katherine Lynch's study of the French state's response to a crisis of working-class families illustrates a new sophistication in our understanding of the complex origins of social policy. She looks at middle-class reformers' formulation of social policy affecting illegitimacy, child abandonment, and child labor and examines the implementation of these policies in three major factory towns--Lille, Mulhouse, and Rouen--in the quarter century before the revolution of 1848. . . . This is a most valuable book that seeks to understand both the politics of reform and the ways in which reformist policies change in the process of implementation. It presents a sophisticated exploration of important issues."--Journal of Economic History

The Fourth Industrial Revolution Nov 27 2022 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Mechanics and Manufacturers in the Early Industrial Revolution Mar 02 2023 Lynn, Massachusetts, once the leading shoe manufacturing city of the United States, was in many ways a model of the industrial city that much of America was to become. This study of the early industrial revolution in Lynn focuses on the journeymen shoemakers--leading participants in the

making of the institutions, ideas, and events that form central themes in the history of working people in America. Spanning the time period from just after the American Revolution to the Civil War, it places special emphasis on the social changes that accompany industrialization, and the impact of those changes on workers. It examines the shoe industry and shoemaking in detail: wages and conditions of work, social clubs and political parties, strikes as well as schools, and trade unions as well as temperance societies. It also explores property ownership and social mobility, the origins and nature of class consciousness and class ideology, and the relations between workers and manufacturers across the spectrum of social institutions. This rich, detailed study of the industrial revolution in a single community is one of the few books available that combines labor history and social history, revealing the fullness and breadth in the experience of the working people.

Utopian Genderscapes Mar 07 2021 "This innovative feminist rhetorical history advances valuable lessons for contemporary discussions in the discipline about teleological rhetorics, rhetorics of exceptionalism, and rhetorics of choice"--

Coping with City Growth During the British Industrial Revolution Dec 16 2021 This book assesses Britain's handling of city growth during the First Industrial Revolution.

Class and Community May 21 2022 In this twenty-fifth anniversary edition of his prize-winning book, Dawley reflects once more on labor and class issues, poverty and progress, and the contours of urban history in the city of Lynn, Massachusetts, during the rise of industrialism in the early nineteenth century. He not only revisits this urban conglomeration, but also seeks out previously unheard groups such as women and blacks. The result is a more rounded portrait of a small eastern city on the verge of becoming modern.

Iron Men Nov 22 2019 In the early nineteenth century, Henry Maudslay, an engineer from a humble background, opened a factory in Westminster Bridge Road, a stone's throw from the Thames. His workshop became in its day the equivalent of Google and Apple combined, attracting the country's best in engineering talent. Their story of innovation and ambition tells how precision engineering made the industrial revolution possible, helping Great Britain become the workshop of the world.

Rockdale Jun 22 2022 A celebrated triumph of historiography, Rockdale tells the story of the Industrial Revolution as it was experienced by the men, women, and children of the cotton-manufacturing town of Rockdale, Pennsylvania. The lives of workers, managers, inventors, owners, and entrepreneurs are brilliantly illuminated by Anthony F. C. Wallace, who also describes the complex technology that governed all of Rockdale's townspeople. Wallace examines the new relationships between employer and employee as work and workers moved out of the fields into the closed-in world of the spinning mule, the power loom, and the mill office. He brings to light the impassioned battle for the soul of the mill worker, a struggle between the exponents of the Enlightenment and Utopian Socialism, on the one hand, and, on the other, the ultimately triumphant champions of evangelical Christianity.

The First Industrial Woman Mar 19 2022 Why study women and the industrial revolution? Deborah Valenze's groundbreaking reassessment of this classic problem in European history reminds us that questions of gender and work are at the center of our experience in the modern world. Too often, the study of industrialization charts an inevitable and largely technological course. Valenze sets aside this approach in order to examine the underlying assumptions about gender and work that informed the transformation of English society, and in turn, our ideas about economic progress. How did England change from an agriculturally based nation, in which female labor played an active and acknowledged part, to an industrial power resting on a notion of male productivity? Through selective treatments of agriculture, spinning, and cottage

industries, Valenze shows how the rise of values of productivity and rationality subordinated women of the working class and strengthened an emerging ethos of individualism. She also analyzes the influential ideas of Thomas Malthus, Hannah More, and other authors, whose publications reinforced these same tendencies in the early nineteenth century. In an elegant and compelling account, Valenze charts the birth of a new economic order resting on social and sexual hierarchies which remain a part of our contemporary lives.

The Industrial Revolutions, 11 Volume Set May 29 2020 The Economic History Society, in association with Blackwell Publishers, announces the publication in eleven volumes of a new collection of seminal articles on the industrial revolutions worldwide. Each volume includes twenty to twenty-five articles representing the most influential writing on the subject, accompanied by editorial introductions surveying the main strands of intellectual advancement and the important conceptual advances that have characterized research on the topics under consideration. The collection forms a set of volumes on all aspects of the Industrial Revolution, providing a unique resource for libraries with collections in economics and history. Together, they give an insight into the development of research on the subject over the last 50 years. The Industrial Revolutions under discussion are the first industrial revolution - the period of the cotton mill and the steam engine, rather than electrical engineering, fine chemicals and the internal combustion engine. The Industrial Revolutions were events of such profound and continuing importance for all societies that achieving a better understanding of their nature must be a prominent aspect of the educational objectives of both individuals and institutions.

The Company Town Jan 25 2020 Built by industrialists whose early businesses contributed to the escalation of the Industrial Revolution, company towns flourished in countries that embraced capitalism and open-market trading. In many instances, the company town came to symbolize the wrecking of the environment, especially in places associated with extractive industries such as mining and lumber milling. Some resident industrialists, however, took a genuine interest in the welfare of their work forces, and in a number of instances hired architects to provide a model environment. Overtaken by time, these towns were either abandoned or caught up in suburban growth. The most thorough-going and only international assessment of the company town, this collection of essays by specialists and authorities of each region offers a balanced account of architectural and social history and provides a better understanding of the architectural and urban experiences of the early industrial age.

Markets and Manufacture in Early Industrial Europe (Routledge Revivals) Oct 14 2021 This edited collection, first published in 1991, focuses on the commercial relations, marketing structures and development of consumption that accompanied early industrial expansion. The papers examine aspects of industrial structure and work organisation, including women's work, and highlight the conflict and compromise between work traditions and the emergence of a market culture. With an overarching introduction providing a background to European manufacturing, this title will be of particular interest to students of social and economic history researching early industrial Europe and the concurrent emergence of a material, consumer culture.

The Labouring Classes in Early Industrial England, 1750-1850 Dec 04 2020 This is the most comprehensive and up-to-date synthesis of current research on the social conditions, experiences and reactions of working people during the period 1750 - 1850.

The French Worker Oct 02 2020 This anthology, drawn from the autobiographies of seven men and women whose lives span the nineteenth century, provides a rare glimpse of the everyday lives of workers in the age of early industrialization in France. Appearing for the first time in English, these stories vividly convey the ambitions, hardships, and reversals of ordinary people struggling to gain a measure of respectability. The workers' livelihoods are diverse: chair-maker,

embroiderer, joiner, mason, silk weaver, machinist, seamstress. Their stories of daily activities, work life, and popular politics are filled with lively, often poignant moments. We learn of dismal, unsanitary housing; of disease; workplace accidents; and terrible hardship, especially for the children of the poor. We read of exploitation and injustice, of courtship and marriage, and of the sociability of the wine-merchant's shop and the boardinghouse. Traugott's analytic introduction discusses the many shifts in French society during the nineteenth century. Used in combination with other sources, these autobiographies illuminate the relationship between changes in working conditions and in the forms of political participation and protest occurring as the century came to a close.

The Early American Industrial Revolution, 1793-1850 Feb 18 2022 Follows the development of the American Industrial Revolution from 1793 to 1850, including the major industrial inventions and advances of the time period.

Iron-making Societies Feb 24 2020 The Title of this Book has a Double meaning: on the one hand, it deals with two very different societies both of which made iron in the early modern period. On the other hand, iron made these societies; the needs of iron production and the resistance to these demands from local peasant communities gave them a special kind of cohesion and rationality. This volume presents the findings of a joint team of Swedish and Russian scholars examining the social organisation of work in early modern iron industry in their respective societies. It examines actual production processes, the organisation of work, social conflict, questions of ownership and its evolution, as well as the diffusion and organisation of technical knowledge.

Leisure in the Industrial Revolution Sep 25 2022 First published in 1980. This book is a study of what different classes of society understood by leisure and how they enjoyed it. It argues that many of the assumptions which have underlain the history of leisure are misleading, and in particular the notions that there was a vacuum in popular leisure in the early Industrial Revolution; that with industrialisation there was sharp discontinuity with the past; that cultural forms diffuse themselves only down the social scale, and that leisure helped ease class distinctions. An alternative interpretation is suggested in which popular culture can be seen as an active agent as well as a victim. This title will be of interest to students of history.

From Alienation to Addiction Apr 27 2020 Over the past two hundred years, work experiences have changed greatly, causing new issues such as heightened boredom and alienation, but also new levels of obsession with work. This book looks at the modern changes in work, examining global patterns but also special features of the work culture in the United States. For the world, the United States, and also key groups such as women and children, understanding the modern history of work goes a long way toward explaining key issues in the U.S. work culture today.

Labor Before the Industrial Revolution Sep 13 2021 One cannot conceive of capitalism without labor. Yet many of the current debates about economic development leading to industrialization fail to directly engage with labor at all. This collection of essays strives to correct this oversight and to reintroduce labor into the great debates about capitalist development and economic growth before the Industrial Revolution. By attending to the effects of specific regulatory, technological, social and physical environments on producers and production in a set of specific industries, these essays use an "ecological" approach that demonstrates how productivity, knowledge and regime changed between 1400 and 1800. This book will be of interest to researchers in history, especially labor history, and European economic development.

The Industrial Revolution in America Apr 08 2021 Describes the rise of the steamship in the United States and its effect on the industrial revolution.

The First Industrial Nation Oct 26 2022 "This celebrated and seminal work examines the industrial revolution, from its genesis in pre-industrial Britain, through its development and into maturity. The First Industrial Nation charts the changes in the British economy, agriculture, trade finance, labor and transport, from 1700 to the inter-war years of the twentieth century. First published in 1969, and now with a new introduction The First Industrial Nation is widely recognized as the classic tome on the industrial revolution."--Publisher's description.

Manufacturing Revolution Nov 15 2021 "While much has been written about the industrial revolution," writes Lawrence Peskin, "we rarely read about industrial revolutionaries." This absence, he explains, reflects the preoccupation of both classical and Marxist economics with impersonal forces rather than with individuals. In *Manufacturing Revolution* Peskin deviates from both dominant paradigms by closely examining the words and deeds of individual Americans who made things in their own shops, who met in small groups to promote industrialization, and who, on the local level, strove for economic independence. In speeches, petitions, books, newspaper articles, club meetings, and coffee-house conversations, they fervently discussed the need for large-scale American manufacturing a half-century before the Boston Associates built their first factory. Peskin shows how these economic pioneers launched a discourse that continued for decades, linking industrialization to the cause of independence and guiding the new nation along the path of economic ambition. Based upon extensive research in both manuscript and printed sources from the period between 1760 and 1830, this book will be of interest to historians of the early republic and economic historians as well as to students of technology, business, and industry.

The First Industrial Revolution Jan 29 2023 This book identifies the strategic changes that affected Britain from 1750-1850.

The First Industrial Revolutions Aug 12 2021 This is the first volume in the new series *The Nature of Industrialization*. It provides a critical review of controversy over the established interpretations of industrialization processes in Britain and Europe before 1950.

Child Workers in England, 1780–1820 Jun 10 2021 The use of child workers was widespread in textile manufacturing by the late eighteenth century. A particularly vital supply of child workers was via the parish apprenticeship trade, whereby pauper children could move from the 'care' of poor law officialdom to the 'care' of early industrial textile entrepreneurs. This study is the first to examine in detail both the process and experience of parish factory apprenticeship, and to illuminate the role played by children in early industrial expansion. It challenges prevailing notions of exploitation which permeate historical discussion of the early labour force and questions both the readiness with which parishes 'offloaded' large numbers of their poor children to distant factories, and the harsh discipline assumed to have been universal among early factory masters. Finally the author explores the way in which parish apprentices were used to construct a gendered labour force. Dr Honeyman's book is a major contribution to studies in child labour and to the broader social, economic, and business history of the late-eighteenth and early-nineteenth centuries.

The First Industrial Region Jul 31 2020 "This book has much to offer second- and third-year undergraduates, postgraduates and researchers in economic, social and urban history, and historical geography."--Jacket.

No Ordinary Disruption Mar 27 2020 Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global

Institute, *No Ordinary Disruption: The Four Forces Breaking all the Trends* is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets *No Ordinary Disruption* apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life— facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

Urban Workers in the Early Industrial Revolution Dec 28 2022 This title, first published in 1984, focuses primarily on the early Industrial Revolution (c. 1780-1820) in the Stockport district. As the Industrial Revolution in England was the first instance of successful industrialisation, it can still provide many social and economic lessons and also furnish essential evidence for continuing debate over ideology and theory. Therefore, this title will be of interest to students of both history and economics.

The Forging of the Modern State Jul 23 2022 In this hugely ambitious history of Britain, Eric Evans surveys every aspect of the period in which the country was transformed into the world's first industrial power. This was an era of revolutionary change unparalleled in Britain, yet one in which transformation was achieved without political revolution. The unique combination of transition and revolution is a major theme in the book, which ranges across the embryonic empire, the Church, education, health, finance, and rural and urban life. Evans gives particular attention to the Great Reform Act of 1832. The Third Edition includes an entirely new introductory chapter, and is illustrated for the first time.

The Industrial Revolution and British Society Apr 20 2022 This text is a wide-ranging survey of the principal economic and social aspects of the first Industrial Revolution.

The Labouring Classes in Early Industrial England, 1750-1850 Dec 24 2019 This is the most comprehensive and up-to-date synthesis of current research on the social conditions, experiences and reactions of working people during the period 1750 - 1850.

Transitions to Capitalism in Early Modern Europe Feb 06 2021 Between the end of the Middle Ages and the Industrial Revolution, the long-established structures and practices of European agriculture and industry were slowly, disparately, but profoundly transformed. *Transitions to Capitalism in Early Modern Europe*, first published in 1997, narrates and analyzes the diverse patterns of economic change that permanently modified rural and urban production, altered Europe's economy and geography, and gave birth to new social classes. Broad in chronological and geographical scope and explicitly comparative, the book introduces readers to a wealth of information drawn from throughout Mediterranean, east-central, and western Europe, as well as to

the classic interpretations and current debates and revisions. The study incorporates scholarship on topics such as the world economy and women's work, and it discusses at length the impact of the emergent capitalist order on Europe's working people.

History of Urban Form Before the Industrial Revolution Jan 17 2022 Provides an international history of urban development, from its origins to the industrial revolution. This well established book maintains the high standard of information found in the previous two editions, describing the physical results of some 5000 years of urban activity. It explains and develops the concept of 'unplanned' cities that grow organically, in contrast with 'planned' cities that were shaped in response to urban form determinants. Spread throughout the texts are copious illustrations from a wealth of sources, including cartographic urban records, aerial and other photographs, original drawings and the author's numerous analytical line drawings.
