Technology and Capital in the Age of Lean Production Sep 13 2021 The first defense of Marxian political economy against the common interest claims of "lean production."

*Chicago Made* Jan 17 2022 From the lumberyards and meatpacking factories of the Southwest Side to the industrial suburbs that arose near Lake Calumet at the turn of the twentieth century, manufacturing districts shaped Chicago's character and laid the groundwork for its transformation into a sprawling metropolis. Approaching Chicago's story as a reflection of America's industrial history between the Civil War and World War II, *Chicago Made* explores not only the well-documented workings of centrally located city factories but also the overlooked suburbanization of manufacturing and its profound effect on the metropolitan landscape. Robert Lewis documents how manufacturers, attracted to greenfield sites on the city's outskirts, began to build factory districts there with the help of an intricate network of railroad owners, real estate developers, financiers, and wholesalers. These immense networks of social ties, organizational memberships, and financial relationships were ultimately more consequential, Lewis demonstrates, than any individual achievement. Beyond simply giving Chicago businesses competitive advantages, they transformed the economic geography of the region. Tracing these transformations across seventy-five years, *Chicago Made* establishes a broad new foundation for our understanding of urban industrial America.

*Technological Entrepreneurship* May 21 2022 Mission Statement: Research in Management and Entrepreneurship is a thematic book series where each volume will focus on a single major issues in entrepreneurship. Volumes will not be published on any specific time table, but will be published when sufficient research interests exists to justify one. This series will focus on a specific emerging issue or on ones that could benefit from a consolidated, single source treatment. Thus, Research in Management and Entrepreneurship will be a comprehensive first source for academics, doctoral students and practitioners seeking information on selected topics. The papers in Research in Management and Entrepreneurship will be written by leading researchers and present the latest empirical and theoretical work on the topic selected. Contributions will cover a variety of perspectives from the various business disciplines as well as from allied fields such as economics, sociology and psychology. The volumes will be international in their coverage and the research presented will be balanced between developing and developed economies, where appropriate. The volumes will also have broader appeal that do academic journals because the literature can be fully reviewed and theoretical links more fully discussed.

Geography, History and Social Sciences Jan 25 2020 Georges Benko «Societies are much messier than our theories of them» Michael Mann The Sources of Social Power 1 Towards a unified social theory Why are there communication problems between the different disciplines of the social sciences? And why should there be so much misunderstanding? Most probably because the encounter of several disciplines is in fact the encounter of several different histories, and therefore of several different cultures, each interpreting the other according to the code dictated by its own culture. Inevitably geographers view other disciplines through their own cultural filter, and even a benevolent view remains 'ethnocentric'. It was in order to avoid such ethnocentricity that Fernand Braudel called for more unity among the social sciences in 1958 : «I wish the social sciences . . . would stop discussing their respective differences so much . . . and instead look for common ground . . . on which to reach their first agreement. Personally I would call these ways : quantification, spatial awareness and 'longue duree'». In its place at the center of the social sciences, geography reduces all social reality to its spatial dimensions. Unfortunately, as a discipline, it considers itself all too often to be in a world of its own. There is a need in France for a figure like Vidal de la Blanche who could refocus attention away from issues of time and space, towards space and social reality. Geographic research will only take a step forward once it learns to address the problems facing all the sciences.

**The Regional World** Jul 23 2022 This pioneering volume proposes a compelling new theory of how regions have sustained their economic viability in the era of multinational corporations. Unlike traditional approaches, which analyze economic systems in terms of their mechanics (inputs, outputs, prices, technology, etc.), this work views them as systems for coordinating human actions and relationships. Reconceptualizing the role of learning, technology, and local institutions in development, Storper illuminates the key role of regional economies as building blocks of the increasingly connected world. A thought-provoking and timely work, *The Regional World* carries resounding implications for educators, students, and policymakers in economic geography, economic sociology, and international business. It is an essential primary or supplementary text for graduate-level courses on economic, regional, or industrial development and policy and international business.

*Institutions and Systems in the Geography of Innovation* Sep 01 2020 This volume provides a collection of theoretical articles and empirical studies on innovation and location by focusing on the institutions and systems that mediate knowledge spillovers. The objective is to provide an international comparison using a variety of approaches. The volume is organized around the three themes. The first focuses on theoretical work that attempts to advance our understanding of knowledge externalities and systems on innovation. The second section provides empirical studies that attempt to measure these impacts. The final section considers future challenges to regional economic development policy in the face of economic integration and globalization.

**European Spatial Planning and Territorial Cooperation** Sep 25 2022 There is a strong international dimension to spatial planning. European integration strengthens interconnections, development and decision-making across national and regional borders. EU policies in areas such as environment, transport, agriculture or regional policy have far-reaching effects on spatial development patterns and planning procedures. Planners in the EU are now routinely engaged in cooperation across national borders to share and devise effective ways of intervening in the way our cities, towns and rural areas develop. In short, the EU has become an important framework for planning practice, research and teaching. Spatial planning in Europe is being 'Europeanized', with corresponding changes for the role of planners. Written for students, academics, practitioners and researchers of spatial planning and related disciplines, this book is essential reading for everybody interested in engaging with the European dimension of spatial planning and territorial governance. It explores: spatial development trends and their influence on planning the nature, institutions and actors of the European Union from a planning perspective the history of spatial planning at the transnational scale the planning tools, perspectives, visions and programmes supporting European cooperation on spatial planning the territorial impacts of the Community's sector policies the outcomes of European spatial planning in practice.

*Encyclopedia of Geography* Apr 08 2021 Simply stated, geography studies the locations of things and the explanations that underlie spatial distributions. Profound forces at work throughout the world have made geographical knowledge increasingly important for understanding numerous human dilemmas and our capacities to address them. With more than 1,200 entries, the Encyclopedia of Geography reflects how the growth of geography has propelled a demand for intermediaries between the abstract language of academia and the ordinary language of everyday life. The six volumes of this encyclopedia encapsulate a diverse array of topics to offer a comprehensive and useful summary of the state of the discipline in the early 21st century. Key Features Gives a concise historical sketch of geography's long, rich, and fascinating history, including human geography, physical geography, and GIS Provides succinct summaries of trends such as globalization, environmental destruction, new geospatial technologies, and cyberspace Decomposes geography into the six broad subject areas: physical geography; human geography; nature and society; methods, models, and GIS; history of geography; and geographer biographies, geographic organizations, and important social movements Provides hundreds of color illustrations and images that lend depth and realism to the text Includes a special map section Key Themes Physical Geography Human Geography Nature and Society Methods, Models, and GIS People, Organizations, and Movements History of Geography This encyclopedia strategically reflects the enormous diversity of the discipline, the multiple meanings of space itself, and the diverse views of geographers. It brings together the diversity of geographical knowledge, making it an invaluable resource for any academic library.

**Manufacturing Culture** Mar 19 2022 Recent years have seen a lively debate over the role of tacit knowledge and interactive learning in privileging the local over the global. Yet, our continuing inability to answer questions such as 'when and why is the local important in production and innovation processes?' indicates that our understanding of the firm and the forces that shape its managers' choices remains weak. Such a theory ought to be able to answer fundamental questions like: why do firms in particular places adopt particular production and innovation practices, and not others? What forces determine what a firm 'knows' and when it is able to act upon this knowledge? How easy is it to transfer this knowledge between places? This book presents a new conception of industrial practice and firm behaviour. It explains how the cultures that shape the practices of firms and the trajectories of regional and national economies are actually produced. The analysis shows how the internal and inter-firm organization of production, use of technologies, and the industrial knowledge underpinning these practices are strongly influenced by their social and institutional context. Routine forms of behaviour are not simply inherited from past practice. Instead, they are shaped and constrained - though not wholly determined - by a set of institutions that govern how work is organized, workers are deployed, and technology is implemented. Because of the slowly evolving nature of these institutions, distinctive national 'models' are not converging around a single global norm.

**Fordism, Flexibility, and Regional Productivity Growth** Jun 29 2020 First Published in 1997. Routledge is an imprint of Taylor & Francis, an informa company.

*Beyond Territory* Jan 29 2023 The main purpose of the book is to discuss new trends in the dynamic geography of innovation and argue that in an era of increasing globalization, two trends seem quite dominant: rigid territorial models of innovation, and localized configurations of innovative activities. The book brings together scholars who are working on these topics. Rather than focusing on established concepts and theories, the book aims to question narrow explanations, rigid territorializations, and simplistic policy frameworks; it provides evidence that innovation, while not exclusively dependent on regional contexts, can be influenced by place-specific attributes. The book will bring together new empirical and conceptual work by an interdisciplinary group of leading scholars from areas such as economic geography, innovation studies, and political science. Based on recent discussions surrounding innovation systems of different types, it aims to synthesize state-of-the-art know-how and provide new perspectives on the role of innovation and knowledge creation in the global political economy.

The Rise and Decline of Dutch Technological Leadership (2 Vols) May 09 2021 This book provides a wide-ranging overview of Dutch technological leadership in the early modern Europe, it explains whence this leadership came about and why it ended and it explores to what extent the Dutch case illuminates the evolution of technological leadership in general.

*The Oxford Handbook of Contextual Political Analysis* Feb 24 2020 This is part of a ten volume set of reference books offering authoritative and engaging critical overviews of the state of political science. This work explores the idea of context in politics from a number of angles, including philosophically psychologically, historically and culturally.

The Politics of High Tech Growth Jan 05 2021 This book argues that beneath the Irish trade and foreign investment boom lies a more interesting story of regional innovation promoted by an alliance between the state and local technical communities. This alliance was governed through a decentralized set of state institutions, drawing on 'global' and 'local' economic and political resources. This 'Developmental Network State' has had a significant impact on the growth of Ireland's high tech cluster and is central to the emergence of an international network of 'global high tech regions' from Silicon Valley to Ireland, Taiwan, and Israel. The book provides a detailed study of the rise of the software industry in Ireland and of the state institutions and political conditions which promoted it. It shows how new 'network state' policies and institutions have been central to high tech regions elsewhere.

**Second Tier Cities** Jun 10 2021 Over the past thirty years, transnational investment, trade, and government policies have encouraged the decentralization of national economies, disrupting traditional patterns of urban and regional growth. Many smaller cities -- such as Seattle, Washington; Campinas, Brazil; Oita, Japan; and Kumi, Korea -- have grown markedly faster than the largest metropolises. Dubbed here "second tier cities, " they are home to specialized industrial complexes that have taken root, provided significant job growth, and attracted mobile capital and labor. The culmination of an ambitious five-year, fourteen-city research project conducted by an international team of economics and geographers, *Second Tier Cities* examines the potential of these new regions to balance uneven regional development, create good, stable jobs, and moderate hyper-urbanization. Comparing across national borders, the contributors describe four types of second tier cities: Marshallian industrial districts, hub-and-spoke cities, satellite platforms, and government-anchored complexes. They find that both industrial and regional policies have been important contributors to the rise of second tier cities, though the former often trump the latter. Lessons for local, national, and international policymakers are drawn. The authors are critical of devolution and argue that it must be accompanied by strong labor and environmental standards and mechanisms to overcome differential regional resource endowments.

*Inequality In Labor Market Areas* Jun 22 2022 During the past two decades, many attempts have been made to refocus stratification research and the study of inequality. The contributors to this volume have a long-term concern with the importance of space and locality. Many of them belonged to a research project during the early 1980s that had as one of its main aims the analysis of labor force

*Working Regions* Mar 27 2020 Working Regions focuses on policy aimed at building sustainable and resilient regional economies in the wake of the global recession. Using examples of four ‘working regions’ — regions where research and design functions and manufacturing still coexist in the same cities — the book argues for a new approach to regional economic development. It does this by highlighting policies that foster innovation and manufacturing in small firms, focus research centers on pushing innovation down the supply chain, and support dynamic, design-driven firm networks. This book traces several key themes underlying the core proposition that for a region to work, it has to link research and manufacturing activities — namely, innovation and production — in the same place. Among the topics discussed in this volume are the issues of how the location of research and development infrastructure produces a clear role of the state in innovation and production systems, and how policy emphasis on pre-production processes in the 1990s has obscured the financialization of intellectual property. Throughout the book, the author draws on examples from diverse industries, including the medical devices industry and the US photonics industry, in order to illustrate the different themes of working regions and the various institutional models operating in various countries and regions.

*Regions* Apr 20 2022 This volume gathers a collection of the most seminal essays written by leading experts in the field, which identify or signal many of the changing directions of regional research in geography during the past fifty years. Various forms of 'new regionalism' or 'new regional geography' have emerged over the last several decades, especially in political and economic geography, but in general the region has been a concept in declining use. Despite this, the region has gained new currency in sub-areas of political and economic geography and a so-called 'new regionalism' has emerged in studies of the changing nature of the nation-state in a globalizing economy. Taken together, the essays in this volume provide the reader with a comprehensive overview of academic developments in this area of geographical research.

**Territory** Nov 27 2022 This short introduction conveys the complexities associated with the term "territory" in a clear and accessible manner. It surveys the field and brings theory to ground in the case of Palestine. A clear and accessible introduction to the complexities associated with the term "territory".

Provides an interdisciplinary survey of the many strands of research in the field. Addresses specific areas including interpretations of territorial structures; the relationship between territoriality and scale; the validity and fluidity of territory; and the practical, social processes associated with territorial re-configurations. Stresses that our understanding of territory is inseparable from our understanding of power. Uses Israel/Palestine as an extended illustrative case study. The author’s strong legal and geographical background gives the work an authoritative perspective.

**Creating Technology-Driven Entrepreneurship** Aug 12 2021 This book proposes a comprehensive analysis of the existing schools of thought on technology-driven entrepreneurship to point out the process-based nature of this phenomenon. It explores whether entrepreneurship can be learned and examines the main processes that help influence entrepreneurial mind-sets. In the current economic landscape, technology-driven entrepreneurship is the driving force behind national economies and entrepreneurial societies. It is the engine of innovation, job creation, productivity and economic growth, bringing benefits both at the level of the individual and of the society and promoting sustainable smart growth and development. This book provides a comprehensive view of “how” entrepreneurs and future entrepreneurs learn and develop their business ventures in a wider environment. Moreover, it discusses issues concerning setting up the suitable entrepreneurial environments, processes, values and policies to encourage and foster individual entrepreneurial aptitudes. It also explores practices for developing technology-driven entrepreneurship in a European context as well as in emerging regions.

*Innovation and Regional Technological Convergence* Dec 04 2020 This open access book explores the role of innovation in technological convergence processes in the EU regional space and shifts the focus from absolute and conditional income convergence to technological convergence and its determinants.

Presenting new theoretical and empirical evidence on the determinants and trajectory of the EU region’s development and convergence, this book will appeal to scholars of economics and regional science, as well as practitioners and policymakers interested in the policy implications of regional technological convergence. The presented findings will also contribute to the development of the knowledge-based economy paradigm in the regional context.

**The China Information Technology Handbook** Nov 15 2021 This handbook is a reference for those interested in information technologies and emerging management practices in China. The emphasis on information technologies and management provides a unique proposition and gives characteristics of flexibility and adoption to diverse audiences. The subject area is a combination of global information technology and management along with strategic management of IT. The handbook exploits state-of-the-art and emerging trends in theory and technology. This handbook is primarily designed for a professional and academic audience.

**Clusters in Urban and Regional Development** Oct 22 2019 Going beyond the celebrated 'hot-spots' of economic development, this book draws upon evidence from a broader range of cities and regions to help fill some important gaps in our knowledge of how clusters operate within the contemporary global economy. This book was previously published as a special issue of the journal Urban Studies.

*Technology Transfer* Dec 16 2021 This book identifies the major factors responsible for effective transfer of information and human expertise from an advanced country or a multinational corporation to the developing world.

**The Rapidly Transforming Chinese High-Technology Industry and Market** Jul 11 2021 A number of indicators point to rapid and extraordinary shifts in the Chinese high-technology landscape. This book places special emphasis on ultra-modern and crucial ICT industries in which Chinese players possess a competitive advantage. It analyzes how formal and informal institutions and associated feedback mechanisms have influenced the Chinese high-technology industry and market. Finally, the book deeply investigates the nature, sources and quality of key ingredients related to the Chinese high-technology industry and provides an insight into the status and locus of this industry. Draws on multiple theoretical lenses for studying the Chinese high technology industry and markets Focuses on a range of technology industries Special emphasis is placed on ultra-modern and crucial ICT industries in which Chinese players possess a competitive advantage

*The Capitalist Imperative* Mar 02 2023 Why do cities, regions and nations experience periods of pronounced growth and decline? Why have the world's centres of economic activity been continually reshuffled as the industrial revolution has spread to new parts of the globe? This book demonstrates that under capitalism, the process central to growth is geographical industrialization, and that the creation and use of territory is fundamental to economic development. In doing so, they make new contributions to the study of growth theory, industrial economics, technological change, industrial organization, labour market, urban and regional development, and theoretical human geography. Beginning with the economics of disequilibrium growth, the authors reveal the technological, organizational and political foundations of industrialization, and conclude by showing that the territorial forms that industry takes are central to the shape and survival of capitalism itself.

**Canada and the Global Economy** Dec 24 2019 A collection of essays by twenty-three of Canada’s leading economic geographers, Canada and the Global Economy is a comprehensive study of the evolving economic and geographic patterns of Canadian development. It provides a benchmark for research on the spatial development of the Canadian economy. The contributors explore four central themes: the locational impacts of the openness of the Canadian economy, Canada's relatively simple economic geography in terms of regional variations in resources and urban development, the problems of keeping pace with rapid advances in technology, and the role of government in maintaining a national market and assisting economic development. They outline the essential elements of Canada's contemporary economic geography and highlight the origins and spatial imprint of change in the Canadian economy; in particular they provide an assessment of Canada's participation in significant international patterns of economic change. Canada and the Global Economy is concerned not only with the economic size and location of consumption and production but also with institutional changes and shifts in employment, the sectoral composition of economic activity, and the organizational structure and locational behaviour of particular industries and firms. Special attention is given to the technological development of both established industries and new service and manufacturing activities. A timely addition to the field, it provides a geographic perspective on significant changes in jobs and types of work that result from the transformation of economic activities.

*Indonesia's Small Entrepreneurs* May 29 2020 In the context of Makassar, on the eastern Indonesian island of Sulawesi, the book explores the socioeconomic and cultural relationships that make life for small entrepreneurs in Makassar so distinctive. Using a new framework for the study of small enterprises - the 'small enterprise integrative framework' - this book gives us a greater understanding of the organization and operations of small enterprises in developing countries, at both the micro and macro levels. The application of this new framework for research reveals the diversity of labour flexibility, networking and cluster styles amongst the enterprises studies, and the constraints they face for growth. Whilst the recent Southeast Asian economic crisis has been heralded by certain commentators as a new era for small enterprises in the region, the book concludes that local realities for the small enterprises in Makassar mean that, whilst for some it has been a time of shifting fortunes, others have continued trading on the margins.

*Splintering Urbanism* Nov 03 2020 Splintering Urbanism makes an international and interdisciplinary analysis of the complex interactions between infrastructure networks and urban spaces. It delivers a new and powerful way of understanding contemporary urban change, bringing together discussions about: \*globalization and the city \*technology and society \*urban space and urban networks \*infrastructure and the built environment \*developed, developing and post-communist worlds. With a range of case studies, illustrations and boxed examples, from New York to Jakarta, Johannesburg to Manila and Sao Paolo to Melbourne, Splintering Urbanism demonstrates the latest social, urban and technological theories, which give us an understanding of our contemporary metropolis.

*Industrial Location* Dec 28 2022 A comprehensive introduction to the economic, social and political forces which have shaped contemporary patterns of industrialization in the USA and other countries. The changing nature of production and systems are also examined in detail

*Clustering Dynamics and the Location of High-Tech-Firms* Oct 26 2022 Across a line drawn from New York to Los Angeles, the level of economi

**Religion, Technology, and the Great and Little Divergences** Oct 14 2021 In Religion, Technology, and the Great and Little Divergences Karel Davids analyses the influence of religious contexts on technological change in China and Europe between c.700 and 1800.

*Cities Enterprise and Society* Jul 31 2020 This collection of essays provides a review and restatement of concepts and analytical insights about the relations between the dynamics of the production system and urban society. A number of questions underline the arrangement of the book, and constitute the central debates in the individual chapters. These questions include: how have large cities and city systems developed in the context of economic globalization and the restructuring processes of the international economy?; what are the restructuring strategies of firms within the urban economy?; how have social and political harmonization and polarization in urban society been affected by entrepreneurial strategies?; and what has been the response of other urban participants, and in particular local authorities to economic restructuring?

**Institutions, Incentives and Communication in Economic Geography** Mar 07 2021 "The author presents a challenging perspective on two key issues within contemporary economic and geographical debate. In his first lecture, the author reconsiders some of the foundations of comparative economics and institutionalism in an analysis of the "societal" and "communitarian" bases of social and economic development. Arguing that the interaction between society and community defines critical incentives for actors, the author suggests a context-sensitive sociological framework for the institutional analysis of economic development. The second lecture focuses on urban economics and argues that existing models of urban concentrations are incomplete unless grounded in a more precise understanding of the most fundamental aspect of proximity, face-to-face contact." -- BACK COVER.

**Knowledge Flows, Technological Change and Regional Growth in the European Union** Aug 24 2022 The book provides conceptual and empirical insights into the complex relationship between knowledge flows and regional growth in the EU. The author critically scrutinizes and enhances the RIS (Regional Innovation System) approach, discussing innovation as a technological, institutional and evolutionary process. Moreover, she advances the ongoing discourse on the role of space and technological proximity in the process of innovation and technological externalities. The book closes with an investigation of the role of technological change and knowledge spillovers in the dynamic growth and “catching-up” of EU regions. ?

**Cosmopolitanism and the Geographies of Freedom** Feb 18 2022 Liberty and freedom are frequently invoked to justify political action. Presidents as diverse as Woodrow Wilson, Franklin Delano Roosevelt, John F. Kennedy, Ronald Reagan, and George W. Bush have built their policies on some version of these noble values. Yet in practice, idealist agendas often turn sour as they confront specific circumstances on the ground. Demonstrated by incidents at Abu Ghraib and Guantánamo Bay, the pursuit of liberty and freedom can lead to violence and repression, undermining our trust in universal theories of liberalism, neoliberalism, and cosmopolitanism. Combining his passions for politics and geography, David Harvey charts a cosmopolitan order more appropriate to an emancipatory form of global governance. Political agendas tend to fail, he argues, because they ignore the complexities of geography. Incorporating geographical knowledge into the formation of social and political policy is therefore a necessary condition for genuine democracy. Harvey begins with an insightful critique of the political uses of freedom and liberty, especially during the George W. Bush administration. Then, through an ontological investigation into geography’s foundational concepts space, place, and environment he radically reframes geographical knowledge as a basis for social theory and political action. As Harvey makes clear, the cosmopolitanism that emerges is rooted in human experience rather than illusory ideals and brings us closer to achieving the liberation we seek.

*Path Dependence and New Path Creation in Renewable Energy Technologies* Oct 02 2020 Why are old technologies persisted with after better alternatives have been invented? This book examines this question, a central concern of evolutionary economics, specifically focusing on renewable energy technologies. The concept of path dependence is used to analyse why and how technological development can become locked-in to inefficient ways of doing things. This book shows how lock-in can be avoided by the creation of new technological pathways. The chapters focus on the comparatively recent introduction of new wind turbine technologies for the generation of carbon free electricity. This case study provides valuable lessons in understanding the issues confronting inventors attempting to commercialise their new ideas in the form of innovations in the face of historically established conventional technologies. It is also set within the critical debate on climate change and the need to de-carbonise energy supplies in order to stop further man-made deterioration in the global environment. This book was originally published as a special issue of European Planning Studies.

**Rural America and the Changing Structure of Manufacturing** Nov 22 2019

**The Wiley-Blackwell Encyclopedia of Urban and Regional Studies** Feb 06 2021 Provides comprehensive coverage of major topics in urban and regional studies Under the guidance of Editor-in-Chief Anthony Orum, this definitive reference work covers central and emergent topics in the field, through an

examination of urban and regional conditions and variation across the world. It also provides authoritative entries on the main conceptual tools used by anthropologists, sociologists, geographers, and political scientists in the study of cities and regions. Among such concepts are those of place and space; geographical regions; the nature of power and politics in cities; urban culture; and many others. The Wiley Blackwell Encyclopedia of Urban and Regional Studies captures the character of complex urban and regional dynamics across the globe, including timely entries on Latin America, Africa, India and China. At the same time, it contains illuminating entries on some of the current concepts that seek to grasp the essence of the global world today, such as those of Friedmann and Sassen on 'global cities'. It also includes discussions of recent economic writings on cities and regions such as those of Richard Florida. Comprised of over 450 entries on the most important topics and from a range of theoretical perspectives Features authoritative entries on topics ranging from gender and the city to biographical profiles of figures like Frank Lloyd Wright Takes a global perspective with entries providing coverage of Latin America and Africa, India and China, and, the US and Europe Includes biographies of central figures in urban and regional studies, such as Doreen Massey, Peter Hall, Neil Smith, and Henri Lefebvre The Wiley Blackwell Encyclopedia of Urban and Regional Studies is an indispensable reference for students and researchers in urban and regional studies, urban sociology, urban geography, and urban anthropology.

**Evolutionary Economic Geography in China** Apr 27 2020 The book provides the first detailed account of the complex geographical dynamics restructuring China's manufacturing industries from the evolutionary economic geography perspective. These geographical and industrial shifts have enormous implications in and beyond China for what is possible in the post-crisis global economy. The book demonstrates that the interface between evolutionary economic geography approaches and other approaches (e.g. global value chain, global production network, institutional economic geography) could be a fertile area for further consideration. The two main audiences that this book appeals to are economic geography and regional science. The topics covered in the book are also relevant to development studies, economics, economic sociology and international studies, offering academics, international researchers, post-graduate and advanced undergraduate students in these fields an accessible, grounded, yet theoretically sophisticated account of the evolutionary economic geography in China and its interaction with firm performance and regional economic development. The book is also attractive to national policy makers, since it engages directly with economic and industrial policy issues, such as industrial competitiveness, regional and national development, industrial and employment restructuring, and trade regulation.
